

- Upgrades the device operating system to Android 4.0 (Ice Cream Sandwich)
- Customisable favourites tray visible on all five home screens just above the hard keys
- *Contacts* app replaced with a *People* app that provides improved integration with Gmail, e-mail, Google+ and other apps
- Multi-tasking allows users easy access to switch between recently used applications by tapping and holding the *Home* key
- Allows you to create folders on the home screen by dragging and dropping one app onto another to create a folder
- New lock screen actions allow users to jump into the camera or pull down notifications to check messages, without unlocking the device

### Google's Chrome Web Store gets updated

Google's Chrome Web Store should be a bit easier to navigate now. The company has introduced new features with an aim to make it easier to discover new apps and extensions. The new features include a 'Trending' section, which lists the hottest offerings, ranking each from 'Warm' to 'On fire' to indicate their popularity among Chrome users. The store now also offers app sub-categories, which allow users to dig deeper into each app category. For example, in the 'Entertainment' category, you can click on the 'Music & Radio' sub-category to only view music related apps.

"Searching for a particular app has also improved. Our search box now sports auto-complete suggestions that guide you to the app or extension you are looking for, faster. And for those of you looking for apps with a particular functionality, e.g., apps that work offline -- our new app badges can be of help. Just look for them on the top section of an app's landing page in the store and click on them if you want to see other apps that have the same functionality. They now come in two flavours--playable on Google+ and offline--and more will follow," the company explained in a blog post.

Google believes that these enhancements should be helpful as more apps and extensions get launched every day.

### HCL, Micromax may bid for Aakash 2

HCL Infosystems, which recently launched two new tablets called HCL ME U1 and HCL MyEdu Tab in India, has expressed willingness to participate in the tender to manufacture Aakash 2. However, the company also made it clear that it would bid only at a 'feasible' price.

Micromax also recently indicated that it may take part in the bidding for the upgraded Aakash version. Deepak Mehrotra, CEO, Micromax said, "We will be looking at it but our costs cannot come down. We will not compromise on the quality of our product." The company has forayed into the tablet market in India with the launch of its first tablet PC--Funbook. Labelled as an edutainment device, the tablet is

### Adobe Malware Classifier open sourced

Adobe has announced that it has open sourced Adobe Malware Classifier, the tool for analysing and classifying malware to help security first-responders. The tool uses machine learning algorithms to classify Win32 binaries such as Windows executables (EXEs) and dynamic link libraries (DLLs) as clean, malicious or unknown, according to Karthik Raman, security engineer at Adobe. "Part of what we do at PSIRT is respond to security incidents," Raman said. "Sometimes this involves analyzing malware. To make life easier, I wrote a Python tool for quick malware triage for our team," he added.

### OpenGamma 1.0 arrives

The latest version of OpenGamma is said to offer a completely open architecture to deliver transparency and improve the quality, accuracy

OpenGamma

and real-time availability of critical trading and risk analysis required by today's front-office traders and risk managers. According to the company, the OpenGamma platform has been downloaded over 4000 times. It has 750,000 lines of code, 9,000 developer days of work and 10,694 test cases. OpenGamma has been guided by the industry expertise of the OpenGamma Quantitative Advisory Board. Member Andrew Rennie, consulting partner at Apollinax and former global head of analytics at Merrill Lynch, contributed to the development process, bringing market oversight to OpenGamma Platform 1.0.
