

sensors together in an accessible, easy to use, handheld design that can be easily kept close in a pocket or bag. More than simply bringing the technology to people, the Tricorder aims to provide intuitive ways of visualising data — so you might see magnetic fields, temperature, or polarisation as naturally as you see colour...There are many applications for the Tricorder we can think of—from imaging to science education and environmental monitoring—but mostly, it's designed for the ones that *you* imagine," says the Tricorder project website.

Ruby creator recognised with Free Software award

Yukihiro Matsumoto (a.k.a. Matz), the creator of the Ruby programming language, won the award for the Advancement of Free Software at the recently held Free Software Foundation's Libre Planet conference in Boston. The award recognises an individual who has made a great contribution to the progress and development of free software, through activities that are in accord with the spirit of free software. Luis Falcon bagged the FSF's award for Projects of Social Benefit on behalf of GNU Solidario for its GNU Health project.

openSUSE Summit: A call for papers!

This year's openSUSE Summit will take place from September 21 to 23, 2012, in Orlando, Florida at the Caribe Royale Hotel. The 'Call for Papers' for this year's summit has been announced.

"The Summit aims to continue the tradition of a fun and exciting gathering. We will deliver a bi-lingual event with some sessions offered in English and some in Spanish. In good openSUSE spirit we also want to make this event as welcoming as possible by inviting other projects to participate in the Summit," the openSUSE project announced.

The openSUSE Summit will comprise three tracks. Presentations, BoF (Birds of a Feather) sessions, and workshops are expected to align with the track topics.

All session proposals for the openSUSE Summit must be submitted by midnight EDT June 15, 2012. A final announcement of the programme will occur on or before July 23, 2012.

The Government of Orissa bags Gold Icon Award for Best Government Portal

The Government of Orissa recently won the Gold Icon Award under the Best Government Portal category at the National Awards for e-Governance 2011-2012, organised by the Department of Administrative Reforms and Public Grievances. The portal adopted by

Now Ubuntu for eyewear!

You have seen Ubuntu on desktops and televisions but now this open source platform is venturing into an entirely new domain -- the eyewear segment. Making an announcement

about this on its official website, Canonical termed this innovation as a 'Groundbreaking face-mounted productivity solution'. This innovation, based on Ubuntu, is set to replace cumbersome PCs and smartphones with a single, lightweight device and will provide lucrative opportunities for software vendors, opticians and eyewear manufacturers.

Commenting on the innovation, the company says, "Miniaturisation has come a long way. Back in the 60s, computers filled whole rooms. By the 80s, they could fit on your desktop. In the 90s we got used to carrying our PCs around and, in the last decade, the smartphone has made pocket productivity a daily reality for knowledge workers across the globe. Now, with *Ubuntu for Eyewear*, Canonical introduces a new class of personal productivity devices, so unobtrusive that neither you nor your co-workers need even know they are there."

Clarion launches Android-powered car stereo

Here comes the first Android-based automotive grade car stereo. The new Clarion Mirage by Clarion Malaysia comes equipped with a 16.5-cm (6.5-inch) screen and the Android touch-screen graphical user interface (GUI). It features USB and AV-out ports, an SD card slot and is designed to be as flexible as a smartphone. It can play back music and video, running apps from Google Play or working as a display repeater with consoles.
