

the Government of Orissa, Directorate of Treasuries and Inspection (DTI), is based on Oracle Fusion Middleware including Oracle WebCenter and Oracle WebLogic Server.

The Department of Administrative Reforms and Public Grievances (under the Ministry of Personnel, Public Grievances & Pensions, Government of India) presents National Awards for e-Governance every year, to recognise and promote excellence in implementing e-governance initiatives.

DTI deployed Oracle WebCenter Portal and Oracle WebLogic Server to build the Integrated Orissa Treasury Management System (iOTMS). The new centralised application enabled DTI to establish effective control over the payment mechanisms for all government expenditures drawn through the treasury and facilitated the generation of electronic receipts of government dues.

Blink your eyes to unlock your Samsung Galaxy!

While the Face Unlock feature took the Samsung Galaxy owners by surprise, users constantly complained that the facial recognition feature could be fooled (and unlocked) using their photos too. Catering to this security issue, the company has added 'blink-recognition' to Face Unlock in a custom version of Ice Cream Sandwich for the Galaxy.

In the modified system, users will have to blink while they are being observed by the Face Unlock feature. This will make sure that it is not a photo but the owner of the phone who is unlocking it.

GNOME 3.4 released

The GNOME Project has announced the latest version of its Linux and UNIX desktop environment. GNOME 3.4 includes several new features and a large number of small improvements in different areas. It features a new virtual machine and a remote access application, a completely revamped Web browsing user experience, integrated document search, first-class Web applications, better graphics tablet support, application menus, and much more.

Adobe launches Open Source Media Framework 2.0

Adobe has launched version 2.0 of its Open Source Media Framework (OSMF) for building feature-rich Flash video players. It is based on the company's closed source Flash platform.

According to Kelash Kumar, product manager, Video Solutions Group, Adobe, "The new version of OSMF 2.0 allows you to create even more engaging experiences for your audience. We worked with some of the largest content owners with the largest online video audiences and have reworked the inner workings of OSMF. In particular, we have made major changes to the Adaptive Bit Rate (ABR) algorithm and the APIs for ABR."

OSMF's Adaptive Streaming provides two modes -- manual switching and automatic switching. As part of the changes, the company has improved the automatic switch operation, added more information to the Quality of Service (QoS) information and history; enhanced the metric base, factory and repository; and finally optimised the rule engine to better handle bandwidth and other computer resources.

Here comes 7notes with Mazez for Android

MetaMobi Corporation has officially released its note-taking app, *7notes with Mazez*, for the Android OS. The application is said to offer solutions that eliminate the barriers between smartphone and tablet users and their keyboards. It can be used within other Android applications such as e-mail, Twitter, and blogging apps. Users can now download *7notes with Mazez* for the Android OS from the Android Market for \$0.99.
