

A List Of Leading Cloud Solution Providers

IBM | Bengaluru, India

IBM Services offers a bouquet of cloud offerings across the foundational components of IaaS, SaaS, PaaS and BaaS.

IBM's cloud-based technology offerings, like SmartCloud Enterprise, help clients and software developers (ISVs or Independent Software Vendors) in India excel in cloud computing, providing secure and reliable Platform as a Service (PaaS) and Infrastructure as a Service (IaaS) solutions. It also provides ready-to-use business solutions in the CRM and HRMS space—solutions that can be enabled and deployed within a matter of weeks, if not days.

Large ISVs and value added resellers or distributors that aspire to become cloud service providers now have an option to contract with IBM to start up their cloud services by paying a nominal royalty and launching their own branded SmartCloud Enterprise equivalent solution.

The offerings currently available are IBM Smart Cloud Entry, IBM SmartCloud Enterprise, the ISV-led cloud offering, IBM Smart Business Desktop, SmartCloud managed back-ups, LotusLive Portfolio and the Cloud Service Provider framework.

Major open source-based offerings: Some of the company's cloud offerings support Linux and open source hypervisors like KVM, which provide the foundation for public and private cloud deployments. For instance, IBM's public cloud offering SmartCloud Enterprise supports the SUSE and RHEL flavours of Linux.

Leading clients: Confianz Information Technologies Pvt Ltd, Sree Charan Cooperative Bank Ltd, Jeppiaar Institute of Technology, WinHire Technologies, EmployWise, True Value Homes (TVH), etc.

USP: On-demand self service, ubiquitous network access, location independent resource pooling, rapid elasticity and provisioning, and a pay-per-use model.

Special mention: The company was recently awarded for its cloud security solutions by SC Magazine in the 'Best Cloud Computing Security' category. EMA (Enterprise Management Associates) also awarded the IBM Tivoli Application Performance Management solution with its 'Best Cloud Vision and Design' award.

Cisco Systems | Bengaluru, India

The company has a comprehensive portfolio of technologies that can be applied by enterprises and service providers to build clouds. These components span compute, storage access and networking, virtualisation, orchestration and self-service capabilities, as well as security, collaboration and video services. The company also provides solutions for customers to deliver cloud services like Collaboration Cloud, Video Delivery, IaaS, VXI, security-as-a-service, etc. The solutions portfolio is driven by a three-pronged cloud strategy:

- Deliver products, solutions and services to organisations so that they can build their own secure clouds that are capable of supporting enterprise-class SLAs.
- Enable service providers to deliver secure cloud solutions and services to their customers.
- Drive technology innovation, open standards and ecosystem development.

Major open source-based offerings: The company is committed to building an open cloud ecosystem with a broad array of partners. Cisco participates actively in OpenStack, an open source platform that facilitates both private and public cloud computing environments. Dynamic provisioning of the network and network-based services is an essential element of cloud computing. In pursuit of this goal, Cisco is helping shape the development of Quantum, Nova, Horizon and other parts of OpenStack. For example, Cisco delivered Quantum reference implementations to
