Viren Mahajan:

Hello guys, I have started using Ubuntu yesterday only and I am not able to use my Wifi connection, as it is saying as no device found, firmware missing. Can you suggest me what to do?

Like · comment

Rajat Khandelwal: I think Wifi software is not installed, or on your laptop, Wifi does not support ubuntu.

Viren Mahajan: In that case, what can be done?

Gukulakrishna Sudharsan: Your post gives us absolutely no info except that you have an Ubuntu installation. Post details about your laptop.

Rajat Khandelwal:

Hello, I am a BCA student and I am interested in open source stuff. Can anyone suggest me any book or magazine to start with it. Thanks.

Like · comment

Sathis Kumar: LFY magazine is a very good option. Else, you can refer to the web too.

Rajat Khandelwal: Do I need perfection in Java or PHP for starting an open source project or should I go with my basics?

Mankala ShravanKumar:

I bought Lenovo G580 laptop and installed Ubuntu 12.04. Wired connection is not working. Can someone help me?

Muziwakhe Mzk Nhlapo: Is your wireless working?

Dux Brandon: MZK guru

Mankala ShravanKumar: Wireless working but wired connection not working.

Crestha Chucheeel:

Is it possible to install android eclairs in Micromax A60? Having problem in Micromax A60 after the OS crashed.

Like · comment

Harry Kaiser: I think, it comes pre-installed with eclair!

Mani Kiran:

Hi friends, can somebody tell me "how to configure my own yum client on my desktop running rhel5 x86_64? While configuring and using, I am getting the following error:

```
[root@kgroup05 repodata]# yum list
Loaded plugins: refresh-packagekit, rhnplugin
This system is not registered with RHN.
RHN support will be disabled.
ftp://192.168.1.5/opt/ftp/pub/Server/repodata/repodata/
repomd.xml: [Errno 14] FTP Error
500 : ftp://192.168.1.5/opt/ftp/pub/Server/repodata/
repodata/repomd.xml
Trying other mirror.
Error: Cannot retrieve repository metadata (repomd.
xml) for repository: rhel-debuginfo.
Please verify its path and try again.

Manas Pradhan: To make ur own local repository for yum try the below

```
Mount ur rhel 5 DVD
and copy the entire Server directory to any location,
Ex- cp -r /media/RHEL5.4/Server/ /var/ftp/pub
Now install createrepo
Ex- rpm -ivh createrepo-0.9.8-4.el5.noarch.rpm
Now make the directory where u had copied ur files
from ur DVD
Ex- createrepo /var/ftp/pub
Now create a yum file with extension *.repo inside /
etc/yum/repos.d/ and append the below lines
Ex- vi /etc/yum/repos.d/manas.repo
[manas]
name=localyum
baseurl=file:///var/ftp/pub
gggcheck=0
enable=1
Hurra!!! Your yum is ready!
```

Mani Kiran: I've tried it before the very same method and the output is what I posted above.

Jai Krishna:

How to configure dhcp server in Linux? Can anybody help me through this?

Like · comment

Jatin Khatri: Have a look at this:

http://www.linuxshometworking.com/wiki/index.php/Quick_HOWTO_-_Ch08_-_Configuring_the_DHCP_Server.

Jai Krishna: Thank you. It really helped me to find a sample file. Thanks a lot!
