

compatible with Java EE 6," says a report in *The H Open*. It is worth mentioning here that Java EE applications can run under Oracle, Red Hat, IBM and Cloudbes cloud platforms.

The reason for the non-inclusion of the cloud, according to Linda DeMichiel, is that Platform-as-a-Service (PaaS) and multi-tenancy support technologies are not yet mature enough for full standardisation. According to the report, "She believes that fully standardising cloud features could mean delaying Java EE 7 until spring 2014. A proposal has therefore now been submitted to the Java EE 7 Expert Group to delay standardisation of PaaS and multi-tenancy support until Java EE 8, which is scheduled for release in the spring of 2015."

What is new in OpenSUSE Linux 12.2?

OpenSUSE Linux 12.2 finally made its debut in the open source world. Here is a rundown on what is new in this latest version:

Superfast speed

This distribution comes with the Linux 3.4 kernel. According to a blog by Jos Poortvliet, openSUSE community manager for SUSE Linux: "It includes a faster storage layer to prevent blocking during large transfers." He even added that KDE 4.8.4 makes the desktop more responsive. Meanwhile, glibc 2.15 boosts the performance of many functions, particularly on 64-bit systems, and Systemd 44 enables faster booting, reports *PC World*.

Advanced infrastructure

It comes with a more advanced infrastructure with a GRUB2 bootloader as default. Poortvliet wrote in his blog post, "We've begun the process of revising and simplifying the UNIX filesystem hierarchy to improve compatibility across distributions, and during start-up and shutdown, Plymouth 0.8.6.1 provides flicker-free transitions and attractive animations."

A sophisticated desktop

GNOME 3.4 adds smoother scrolling, a reworked System Settings app, and an improved Contacts manager, Poortvliet noted. He also added that Xfce 4.10 offers an improved application finder, while the Dolphin file manager is "both prettier and faster."

A range of apps

Included among openSUSE 12.2's software line-up are not just X.org 1.12, with its support for multi-touch input devices and multi-seat deployments, but also Mozilla Firefox, GIMP 2.8, LibreOffice 3.5, Krita 2.4 for painting and illustration, and Tomahawk Player for music, a *PC World* report reports.

Cooler apps

OpenSUSE 12.2 comes with a host of scientific tools providing math applications, the Stellarium astronomical simulator and more. Poortvliet explained that, "programmers will enjoy version 1.0.2 of Google's Go language as well as the latest C++ language standards implemented in GCC 4.7.1 and Qt Creator 2.5."
