

# LINUX Will Now Be ForYou OpenSource ForYou

Before making a formal announcement about changing the name of the magazine, we checked with the industry and the community as to what they felt about the new title. The responses were overwhelming. Most industry experts and community members welcomed this change, which they felt was for the better, and would broaden the horizons of the magazine. Here are a few responses from the industry to the name of *LINUX For You* being changed to *Open Source For You*, with effect from its October 2012 issue:

## Mandar Naik, director, Platform Strategy, Microsoft

I welcome this change in the name from *LINUX For You* to *Open Source For You* as it represents the increasing popularity of the open source development model on multiple platforms, both on-premise and on the cloud. It is important to note that the open source model has been very popular on platforms like Windows Server on premise and Windows Azure in the cloud.

At Microsoft, our increased commitment to working with open source has sparked tremendous momentum, and contributed to the rapid growth of open source software on Windows with the number of open source apps that run on Windows growing 400 per cent to more than 350,000—with 23 of the top 25 OSS projects running on Windows. Codeplex, Microsoft's open source project community, has grown to more than 28,000 open source projects and more than 300,000 registered users. In Windows Azure today, the open source community has a very strong cloud platform that offers seamless support for open source development using technologies like Node.js and improved Linux support.

With the advent of the cloud and the changing landscape of information technology, I see the new and evolved *Open Source For You* expanding its horizon to provide even more impactful content on mixed source environments, both on premise and in the cloud. I wish *Open Source For You* the very best and look forward to the exciting content in the upcoming issues.

## Rajiv Sodhi, managing director, Go Daddy, India

I think this title is much more apt for the community. I think open source, in general, is a broader term than just Linux. I

think it will be well received by the community.

## Mayank Prasad, senior software engineer, Oracle

The new name looks okay to me. I don't think any change in the title matters as long as the content is the same and good enough for me to pick up. Even if the name of the magazine changes to *Open Source For You* while it continues to offer the similar kind of content, I will continue to pick it from the stands.

## Vinod Panicker, senior product architect, Wipro

I am a regular reader of the magazine and I don't think the change will make any difference to me. I guess the change will broaden the scope of the magazine, so it will no more be just Linux-centric. It may change from being a one-point magazine for Linux to becoming more broad-based, covering all open source technologies, like applications that are on the open source framework. So the content will not be restricted to the Linux kernel but will cover open source technologies, across the board. It will not be a niche magazine any more, and will connect to more people. Those who want to read about open source technology will see a wider area being covered in the magazine.

## Yogesh Girikumar, open source evangelist

This is a welcome change. I think it is a nice move. Something that I would like to regularly see in the magazine is content for newbies. That's a major reader segment, which is ignored by magazines and journals in this domain. It will definitely increase the scope of the magazine. You can now
