

The Most Popular Open Source Programming Languages

OSFY gets an update from industry leaders on the top open source languages that will be in demand this year.

If a recent survey conducted by Dice Holdings, a jobs posting website, is anything to go by, developers with razor-sharp open source programming skills will stand out when their resumes fall on recruiters desks. Various studies indicate that technology professionals with these skills and expertise are being sought after like never before. With open source technology fuelling the modern economy and offering great growth opportunities for developers, we get a low-down from industry experts about the top open source programming languages that will be in demand this year.

PHP

In a recent poll conducted by the *OSFY* team on its Facebook page to find out the most popular open source programming language, PHP made its way to the No 1 position. According to industry stalwarts, not only is PHP developer-friendly, but there is a surge in the demand for PHP experts. Rahul Mehra, CEO, UGS Academy, Noida, shares, "The fact that open source packages like Drupal,

Joomla, etc, are built on PHP only explains why it is being touted as the most popular open source programming language. Bigger organisations do hire PHP professionals, but PHP has caught on more at small and medium-based enterprises since it is budget-friendly." Ask Mehra about the salary trends for PHP professionals and he adds, "In India, the salary trends are on the lower side. The reason is that, initially, premium companies latched on to software applications using Java, Microsoft or IBM Mainframe, since these were the languages available then. And these companies are still continuing with the same. So the equation is: bigger pockets=bigger salaries. And certainly, you cannot expect SMEs to offer the same salaries that big companies do. But this is only in India. The global scenario is quite upbeat."

Python

According to our Facebook survey, Python ranked third among the open source programming languages
