A List Of IPv6 Solutions Providers

Array Networks | Bengaluru

The integrated IPv6 gateway on Array APV appliances helps organisations formulate their strategy for IPv6 migration. The various technical controls include dual stack IPv4 and IPv6 SLB, IPv6 SLB, NAT64, DNS64, compression and cache support for IPv6 traffic, all of which provide smooth transition to IPv6 networks.

Brocade | Bengaluru

Brocade provides networking equipment for data centres, campus/LAN networks and service providers (ISP, IXP, Internet content providers, telcos, cable companies, etc) that support IPv4 and IPv6 with the required routing horsepower. Brocade offers one of the industry's most complete families of IPv6 uni-cast, any-cast, multi-cast and transition protocols.

Cisco | Bengaluru

As part of its IPv6 solution, Cisco implements the primary integration techniques of dual-stack, tunnelling and translation that are required by all environments. Cisco IPv6 Services helps organisations to successfully adopt IPv6 through a phased approach in which Cisco identifies and assesses the highest priority IPv6-critical areas in the network to determine the IPv6 design scope.

D-Link | Mumbai

All new D-Link routers, switches and access points are IPv6-ready. D-Link networking solutions support dual stack and tunnelling techniques for a smooth transition. D-Link is one of the major networking vendors actively promoting the new Internet Protocol. D-Link has worked to combine IPv6 readiness with contemporary technologies like 802.11ac and IEEE 1905.1 for connectedness.

ESDS | Nashik

The company now offers its indigenous Cloud Hosting Solution, eNlight Cloud with IPv6, along with integration of new features and enhanced performance. eNlight Cloud is a unique auto-scaling cloud hosting solution that supports pay-per-consume billing model, as against pay-per-allocation which most popular cloud hosting vendors offer. Widely appreciated in the industry for its range of unique features and enterprise class performance, eNlight Cloud now has the distinction of being the first cloud hosting solution in the industry that supports the power of IPv6!

IPv6 opens up a considerably larger pool of IP addresses, owing to its 128 bit length. ESDS has successfully integrated IPSec with IPv6, thus ensuring confidentiality, authentication and integrity of data. The company has leveraged its vast expertise in successfully setting up complex networks to ensure maximum security levels for IPv6, and in turn address all major security concerns that recently surfaced around it.

Leading clients: Ram Bandhu, D-LINKS, Spice, ,Taparia, Aicte, MPSC and Ericsson.

USP: eNlight Cloud empowered with IPv6 will help the webmasters and developers make their websites/applications cloud, as well as IPv6 enabled without any major code modifications. With IPv6 and eNlight's inherent features, enterprises as well as SMBs can now utilize the power of Cloud Computing for hosting their websites and applications.

HP | Bengaluru

HP has a complete lifecycle of IPv6 services, from strategy workshops, readiness assessments, architecture and design, through transition consulting, integration and deployment. HP's breadth of expertise and experience in a multi-vendor IT environment makes it an ideal partner to work with clients to deliver a smooth migration to IPv6.

Huwaei | Bengaluru

To help operators face the IPv4 address depletion and IPv6 transformation, Huawei provides solutions that integrate IPv6 to legacy networks by using technologies like dual stack, 6PE, L2TP, and 6to4. Operators can use these to introduce IPv6 users and services gradually in their existing networks.
