IBM | Bengaluru

IBM is taking a systems-level view of IPv6 by providing end-to-end solutions that include appropriate application, middleware, hardware and service offerings to take advantage of the expanded functionality IPv6 enables. The company is well positioned to meet the needs of commercial and government customers seeking to transition to IPv6.

Juniper | New Delhi

The company's next generation network addressing portfolio of IPv4 address conservation, IPv4-IPv6 address co-existence and IPv6 transition technologies includes IPv6, v4/v6 dual stack, NAT44, NAPT44, NAT-PT, NAT64, 6to4-PMT, 6rd and DS-Lite. These technologies help network operators improve subscriber and service scale, mitigate IPv4 address depletion, and pragmatically transition to IPv6 based on business requirements.

Qualcomm | Mumbai

The Qualcomm Atheros AR4100 is a small form-factor, single-stream, 802.11n Wi-Fi system-in-package (SIP) device that enables manufacturers to reduce M2M system costs and simplify system design. The AR4100P is an enhanced version of the FCC-certified AR4100 that includes an integrated IPv4/IPv6 TCP/IP stack, enabling lower system costs and easier technology adoption.

Sify | Chennai

The company has a dual-stack (IPv4 and IPv6) compliant edge with an MPLS enabled NGN core supporting transport of IPv6 packets along with IPv4. With the dual-stack edge, Sify can offer IPv6 VPN and Internet transit services to its enterprise customers. Sify is the only ISP member in the project 6Choice, an India-Europe cooperative venture for promoting IPv6 adaption. Sify is funding the development of case studies based on its experiments, in order to promote IPv6 migration in the industry.

Tech Mahindra | Pune

With the company's in-depth knowledge of the communications and enterprise ecosystem, Tech Mahindra and Mahindra Satyam offers services in IPv6 consulting, network planning and design; network transformation and testing; security assessment and transition; application software transition and testing, etc. Tech Mahindra has been empanelled by DoT, Government of India, to provide IPv6 consultancy, implementation and project management.

Wipro | Bengaluru

Wipro has vast experience in building and managing complex IP networks on a global scale. It is therefore well positioned to provide IPv6 consulting and transition services to service providers and enterprises of all sizes and in any part of the world. For those enterprises that already have an IPv6 network up and running, Wipro's experience in application development could help recover some of the investments made by taking advantage of IPv6's capabilities.
