'Fight Back' app allows women to alert family when in danger

Now, women in India can rely on technology, if not the arms of law, for their safety. A mobile phone app called 'Fight Back' allows a woman to alert her family and friends with just the press of a button.

Developed by a mobile VAS provider CanvasM, the app helps in tracking the user's location. Using the app, the one in danger can send SOS messages to the selected contacts in times of emergency. According to some

online reports, Jagdish Mitra, chief executive officer, CanvasM, said, "We feel the application can help make a woman feel safe, especially given the current law and order situation. The app allows them to press a panic button whenever they feel unsafe. It tracks the location using GPS and alerts the right people."

The company is also working to integrate the solution with Delhi Police's back-end IT infrastructure. With this integration, the message will go to the Delhi Police as well, along with the family and friends of the user. The app is available for the residents of Delhi-NCR for free, while people willing to download the app from other parts of the country have to pay Rs 100 per annum for the service.

The Fight Back app is available for the Android, BlackBerry and Symbian operating systems.

Android-Linux dual boot option for Aakash 3

Researchers at the Indian Institute of Technology (IIT), Bombay, are working hard on improving the existing Aakash tablet and are looking forward to including additional functionalities at the existing price range of \$35 or Rs 2,236. One of the major features that would be included in the next version of the Aakash tablet is

dual boot compatibility supporting both the Android and Linux operating systems. According to researchers, Aakash 3 would come with more open source software.

President Pranab Mukherjee unveiled the Aakash 2 in New Delhi on November 11, 2012. The Aakash 2 is based on a dual-core Cortex A9 processor clocked at 1 GHz along with 512 MB of RAM. Compared to the first Aakash tablet, which was based on a 366 MHz processor and an older ARM architecture, the Aakash 2 is definitely advanced, running Android 4.0 Ice Cream Sandwich.
