Red Hat Enterprise Linux 5.9 released

Red Hat has announced the next minor release of Red Hat Enterprise Linux 5—Red Hat Enterprise Linux 5.9. This release marks the beginning of Production Phase 2 of Red Hat Enterprise Linux 5. As with all minor releases, Red Hat Enterprise Linux 5.9 maintains backward compatibility with hardware and software platforms across the lifecycle of Red Hat Enterprise Linux 5. Therefore, the hardware and software compatibility included within previous releases of Red Hat Enterprise Linux 5 continues with this minor release. Red Hat Enterprise Linux 5.9 also showcases numerous improvements, including support for industry-leading hardware vendors through enhanced hardware enablement, continued commitment to security, standards and certifications, new developer tools, enhanced application support, better subscription management and more.

You can learn computer basics from the Raspberry Pi education manual

The makers of Raspberry Pi have been constantly on their toes to make learning a wholesome experience. The Raspberry Pi Foundation has already launched a 'Quick Start Guide' for the small-sized computer. A team of UK teachers from Computing at School (CAS) has come up with an open source Raspberry Pi Education Manual to teach basic computer principles.

The 172-page education manual helps in learning about programming and other computer science topics. The PDF manual serves as a beginner's guide for Scratch (a visual programming environment), Python, the Linux command line, and much more. Users are exposed to the experiments for creating games and animations, which will enable them to not only learn coding with the Raspberry Pi, but also get thorough with the basics of computer science. The manual is designed for people of all ages to learn computer science better.

Here's a smartphone that can sense your mood!

Researchers are now working to bring out a smartphone platform that can sense your mood. Known as the Android Remote Sensing app (AIRS), it does 'careful monitoring of the lifestyle to pinpoint and help avert triggers for stress and negative emotions'.

The application analyses the amount and type of data it is exposed to. It makes use of huge amounts of data gathered from various sources like location, weather, noise levels, vicinity devices to gauge crowds, social aspects including calendar events, and communication spikes in email, text and calls. This information is sufficient to provide an account of a person's day.

AIRS behaves like a watchful friend that provides the needed personal management by pointing towards the specific causes of stress, which it ascertains on the basis of the data it gathers. The platform makes use of the in-built sensors in the smartphone to account for environmental aspects, which it then uses to construct a 'narrative'.

These devices will be showcased at the Consumer Electronics Show (CES) 2013 at Las Vegas, which begins on January 8, this year. This new feature will surely excite Android enthusiasts, who have been waiting to watch videos from smartphones and tablets on their TVs (other than Google TV).
