Problems with the CentOS 6.3 DVD

I installed Centos 6.3 from the DVD that came bundled with the OSFY magazine. After booting up, it asks me to log in. I had given rajan.com as my computer name and a simple password. But it is not accepting this, showing instead a 'Login error'. What should I do? Incidentally I am a 78-year old Linux OS fan.

ED: We are assuming that there was no error while installing the OS. The reasons that you could not log in could be many. I would suggest that you try the following:

1. Double check your password. It should match with the one that you have given at the time of installation.
 2. Passwords are case sensitive.
 3. Try logging in to any other user other than the super user, if you have created one.
 4. Log in to your terminal and remove the LD_PRELOAD variable in the bash_profile, in case it is there.
 5. If nothing works, then boot your system in single user mode and reset the super user password. Restart your system and try the new password.
- Hope this helps. If the problem still persists, you can reach us at osfyedit@efyindia.com

Inability to find OSFY in news stores

It would be great if you could send me a list of all the news and magazine stores that sell *Open Source For You*. I used to buy your magazine from the stores but since the name has been changed, I can't find the magazine anywhere near my locality.
