You can also download a few good looking templates that might get you started. There are icons that you can add to the mind map to make it more creative and attractive.

Mind Map Memo

This is a very simple tool that allows you to create mind maps on your Android device. The user interface is very simple. You start by typing in the name of the mind map and that becomes the central node, from which you can just touch and drag the next node and thus build your branch. The same can be done from any node, thereby creating branches and sub-branches. In Mind Map Memo you can save your mind maps to the SD card or even mail it. There are options to change the colour of the node or to add icons to the node.

SchematicMind

This is another Android app for creating and editing mind maps. This is completely free and does not have any features that are locked. The app is quite simple, straightforward and does the job without any confusion. The main features of SchematicMind are:

- Creates an unlimited amount of mind maps.
- Easy-to-use touch interface.
- Apply styles and icons.
- Select from five distinct shapes.
- Define topics, borders and background colours.
- Supports zooming and scrolling.
- Unlimited map size.
- Has the export and import functionality.

MindJet

MindJet is a collaborative work management software company founded by computer programmer Mike Jetter and his wife, Bettina Jetter. The mind mapping tool is called MindJet. This app requires a free registration. Besides the other features that come with the apps we've discussed till now, MindJet also supports gesture control. It can also sync your mind maps to a drop-box, so that you can share your mind maps with other devices like your PC or laptop.

So select any random crazy topic and start mind mapping. You will be mesmerised by the amount of creativity your mind holds. Only practice can make you an expert in mind mapping and once you master the art, irrespective of whether you are a student, a project manager or even if you are just organising a party, you can see the flow of ideas and then see things automatically falling into place. END
