

Mindlance | Bengaluru, India

Mindlance is a global business and information technology consulting firm. It works towards enterprise and collaborative network storage solutions. Its offerings extend to NAS and SAN with smart data management capabilities. Mindlance also offers managed storage services to its clients.

The role of open source in its offerings: The company has recently scaled up its open source capabilities in order to provide more bundled offerings to clients. Mindlance believes in creating customised solutions for customers, and in helping them achieve ROI and business enablement.

Leading clients: One of the leading automobile manufacturers, a leading power management firm, a leading local business search firm and more.

USP: Proactive and consultative, it has a reputation for innovative solutions, clubbed with state-of-the-art services. The company delivers value through a combination of the right people, processes, technologies and program management solutions. Its proven approach includes: applying domain expertise in specific industry segments, utilising a highly skilled technically-trained workforce; leveraging a proven global delivery model that offers onsite, offsite, offshore and hybrid development options; and implementing quality processes and methodologies while staying cost-effective.

Special mention: Mindlance has won a prestigious award from STPI for the highest exports in the south and from Silicon India for being one of the 'Top 10 Promising IMS Companies in India'. Mindlance has also bagged two EDGE Awards instituted by InformationWeek for its 'Unified Communications and Cloud Implementation' projects.

NetApp | Bengaluru, India

The NetApp portfolio of NAS solutions enables flexible provisioning and reliable back-up, archiving, business continuity, and virtualisation. Whether your business uses NFS or CIFS protocols, NetApp NAS devices help cut costs by up to 40 per cent, with consolidation, higher utilisation, and reduced downtime. They also help reduce administrative overhead by up to 60 per cent, while delivering scalable, reliable file storage.

Sify | Chennai, India

The company offers a unified SAN/NAS 'fabric' for IOPS intensive applications. Sify provides myStorage services as laptop and desktop backup services on the cloud.

Role of open source in its offerings: The orchestration in the engine uses multiple open source technologies, one of them being Drupal.

Leading clients: Over 150 enterprise customers using the storage services from industries like retail and banking. Its customers have multi-TB storage for their business critical applications, thanks to Sify's NAS services.

USP: Supports all kinds of case scenarios, block storage, file storage and object storage. The company also provides enterprise class scalable platforms.
