Postgres Plus® Multi-Master Replication With xBD Replication Server

Designed for applications in need
of **write availability** and **read scalability**.

Feature Highlights:

- Deploy multiple masters across geographies
- Continuously synchronize master data
- Uniqueness, Update & Delete conflict detection
- Multiple conflict resolution strategies
- Replicate one or more tables
- Automatic schema replication
- Publication table DDL replication
- Graphical Replication Console and CLI
- Flexible replication scheduler
- Replication History Viewer
- Snapshot and continuous modes

Benefit Highlights:

- Updates can be faster to a local master in a distributed configuration
- If one master fails, other masters continue service
- Synchronize masters between geographies in near real-time
- Conflict resolution options add flexibility to data management
- Easy GUI administration
- A more flexible and available database infrastructure to serve users
