Ridwan Fauzanullah:

Can you tell me the steps on how to block sites server by OS debian 5/6 with the client as Windows?

Like · comment

Samantha de Lucio: I assume you are running a router. Here are some generic pointers.
Bad Lazy Netadmin way:
-Edit hosts file to point IP's to nowhere or local site.
The Good Netadmin Way:
-Configure network traffic filtering in the kernel, recompile and install the new kernel/modules.
-Install and configure ipfilter.
Do a google search for an ipfilter howto, there are a couple of them (i.e. Gentoo ipfilter howto) that also list which options to enable in the kernel.

Sandeep Kane:

Can I keep any two linux based operating system like Fedora and Linux 5.01 or Ubuntu and Linux 5.01? Please let me know if this is feasible?

Samantha de Lucio: Do you want to install two Linux distributions on one PC, and choose which one to run during the startup? This is possible, if you install each Linux on a separate partition and use a boot manager (i.e. grub, lilo) to select which one to start. Most Linux distro's can't be installed on the same partition due to different library versions, dependencies and directory/file hierarchy. Google for 'multiboot Linux howto' to find guides on this subject.

Gaurav ChowMean: This is quite simple. Just install them side by side. You don't have to make any modifications except that disk partition part.

Ahmed Bhd:

Which Linux distribution is best for Web Development in both Server & Desktop?

Like · comment

Vishal Shinde: Ubuntu...

Prashant Dawar: Both Ubuntu and Debian are great choices. Slackware is also preferred.

Mithun Nair: Redhat and Fedora.

Laurence Joseph Navarro:

I am a beginner in Linux. What kind of Linux distro is the best?

Like · comment

Prashant Dawar: You should go for Ubuntu 12.04 or Mint. Zorin OS is great if you are migrating from Windows.

Gaurav ChowMean: Linux Mint.

Laurence Joseph Navarro: Thanks a lot friends!

Khagendra Padhy:

How to do a modem connection from Samsung mobile in Fedora OS?

Like · comment

Mithun Nair: Connect your mobile to the PC, then, type the following in terminal:
nm-connection-editor
then goto mobile broadband tab under the n/w connection window thus opened.
click the add button
now, give-in the details of ur service provider, APN and all...
Save the details and click the computer icon in the panel...
Click on Connect using mobile broadband.
Hurray.. you are connected to net
Alternatively, install wvdial in your machine...
get-in the dialer defaults of ur modem and service provider by googling...
add this file to wvdial.conf and get connected to net.

Vipendra Verma:

I cannot remove Linux Red Hat and install Windows XP. My computer consists of 128 MB of RAM and freezes all the time with Linux. I try to re install Windows and boot from the disk but it says "Checking Hardware Configuration" for 2 seconds. Then the screen goes black. The disk is fine and I just need to know how to format the drive.

Like · comment

Prashant Dawar: Method 1: With Red hat, you can change the partition table and write it.
Method 2: Debug your hard drive.
Method 3: Download partition magic and format with it.

Yogesh Jadhav: Method 4: Format your computer with Windows 2000 Pro and then install Windows XP.
