Arush Salil:

Can you please help me know how can I connect to a WEP wireless network with Shell ?
PS: My wireless card name is wlan0.

Like · comment

Chetan Ghorpade: Try this link: <https://www.google.co.in/search?q=how+to+connect+to+wifi+from+terminal+linux&aq=2&oq=how+to+connect+wifi+from+terminal+&aqs=chrome.357j0j3.24411&sugexp=chrome,mod=4&sourceid=chrome&ie=UTF-8>

Pradeep Singh:

Can anyone tell me why we have different filesystems?

Like · comment

Azad Ansari: Because it gives flexibility and is competent to coexist with many other OS.

Shreyas Joshi: The file system by itself is a hierarchical collection of information i.e. it represents how the different types of data are stored on your system. When you view it on a GUI, you will see this division of data showing up as folders. Moreover, the file system acts as an index containing the physical location of all the data on the drive and provides access to this data via addressing through memory blocks. The various File Systems exist to cater to changing storage parameters such as storage performance, stability, reliability and easy addressing of data in a particular hierarchical model.

Ibrahim Musa:

Is Solaris 11 useful as a desktop OS for web browsing, chatting, playing audio, reading e books, etc?

Like · comment

Pranavam Siddharthan: You would not need a fully loaded monster to do a child's work. Better stick to the Desktop Flavours of Linux. My preference goes to the debian based Mint & Ubuntu.

Ibrahim Musa: But I want to experience a 'real' UNIX, the others are just UNIX 'like'. I use Lubuntu Linux by the way.

Gourav Dwivedi:

How to play a MP3 song in Fedora 14 and Fedora 16 and other Linux based OS?

Like · comment

Avinash Mali: Use VLC, it'll play any media!

Follow this:

<http://www.videolan.org/mc/download-fedora.html>

Azad Ansari: Installing VLC will enable you to play MP3s.

1. Open 'Ubuntu Software Center'
2. Search for 'vlc'
3. Install VLC.

Neil Desai: You may be needing plug-ins for the same.

Sai Prasad:

What is the difference between UNIX AND LINUX? Help me, just confused!

Like · comment

Aboobacker Mk: Unix was the one of the popular OS and Linux is based on Unix.

Sachidananda Sahu: UNIX is main Operating kernel which contains the main part like file management, memory management, process management. When they add some extra features to UNIX it becomes Linux. when they add some extra features to UNIX, then it converts into Ubuntu. In simple terms, UNIX+some extra features =LINUX.
UNIX+some other features =Ubuntu
Unix+some extra features =Fedora.

Azad Ansari: UNIX requires the Licensee to pay while Linux is freely redistributable.

Karthigeyan Kith:

What is system requirement of linux ?

Like · comment

Aditya Magadi: Linux distributions literally run on any system configuration. You just need to download the one that meets your architecture (x86 for intel processors).
