

YOU SAID IT

A wish list for OSFY!

I have been a long-time subscriber of *LFY* (now *OSFY*). While in service, I benefited immensely from your magazine as I was able to maintain Linux servers ably, assisted by a private vendor. After retirement too, I work off and on, and Linux keeps me engaged always. I have introduced Linux where I work now and my colleagues found Ubuntu useful. However, the Linux Mint 13 carried by you recently has found more takers because of its Cinnamon desktop. (There is some problem with Mate - some error message appears.) I recently installed Wine in Cent OS from the source code but its functionality was limited. However, when I installed Wine in Mint 13, I was in for a pleasant surprise. When I clicked Wine, it gave four options. I mounted a borrowed MS Office back-up copy (I work with Open Office only), and it got installed without any hitch. (I did know that software such as CrossOver or Bordeaux were available for this, but I was not comfortable paying in dollars using a credit card.)

Now, I am sure my colleagues will switch over to Linux but use MS Office at the same time, thus enjoying the best of both worlds. Thank you, *OSFY*!

I also have a few suggestions for the *OSFY* team:

1. Wine takes many hours to get installed through the download. Is it not possible to include it in the *OSFY* DVD, ready for installation?
2. I think you have stopped carrying articles in the print issue, on the distros bundled with the DVD, for want of space. Can you not include such articles in the *LFY* website? I am sure an article on Wine will benefit many readers of your magazine.
3. In the September 2012 issue, articles such as 'Remote Access with SSH' and 'Installing Linux on a Mac' were quite interesting and useful for average readers like me. I would like to see more such articles.
4. Thank you for carrying the news item on Raspberry Pi. You could have mentioned that it is available from Kits'n'Spares. I came to know about this only from Google.
5. Recently, I configured DHCP, Squid, Vsftpd and Samba successfully, mainly with the help of the Internet and a book by Christopher Nigus. It took many frustrating days as there is no single resource for a particular distro. For newcomers, articles on configuring CentOS, for instance, will be helpful.

ED: We are indeed happy to receive such insightful feedback from you. We appreciate the fact that you have spent your

valuable time in giving us an array of wonderful suggestions for *OSFY*. Thanks a lot. Your suggestions are most welcome and we will try our best to incorporate them in our future editions. Till then, keep reading *OSFY* and continue sending us your candid views.

Kudos to the author of 'Cyber Attacks Explained'

The article series 'Cyber Attacks Explained' by Prashant Phatak was simply amazing! I must admit that he has done a fantastic job of enlightening students like me who are keen on the security sector. Presently, I am doing the RHS333 course, after having done the RHCE and RHCSA, and these articles have indeed helped me a lot. His articles in the August edition ('The Botnet Army') and the November issue ('Device Evasions') deserve special mention as these were very informative. Hope he comes up with yet another good series of articles in the forthcoming issues. I wish him all the luck for the same. And finally, a big thanks to the *OSFY* team for providing a platform to authors like him.

ED: We are indeed pleased to know that you have been a keen follower of the *Cyber Attack* series and found them informative. We will certainly convey your words of appreciation to Prashant Phatak. We are sure he will come up with more such enriching write-ups for his fans in the future too. Thanks for sharing your experience with us. Please do keep reading the magazine; we look forward to your valuable feedback.

On changing the name of your magazine

I am indeed happy to know that *LFY* has changed its name to *Open Source For You*. It might not be so important for those of us who already use Linux or are involved in the FOSS ecosystem, but it definitely makes a lot of sense for people still not so aware of FOSS, who perhaps keep themselves away from journals like *LFY* (now *OSFY*) because of the 'Linux' on the magazine's masthead. I have experienced this with fellow students in my college. I hope *OSFY*'s readership increases considerably with this move, which will help FOSS to spread further in India and elsewhere. All the best!

ED: Thanks a lot for the feedback and we do feel the same as you do. Linux is undoubtedly indispensable in the open source world, but the scope of open source technology has widened
