What more?

Advanced applications can be built by using APIs, adding user groups and configuring enterprise workflows.

The ecosystem also consists of several plug-ins submitted by the open source community, which power the capability of OpenVBX. These can be added easily. To start using real phone numbers, you can buy a number from Twilio. Although OpenVBX was born at Twilio, other platforms like Tropo also provide an implementation. Other providers might also work to have OpenVBX run on more than one cloud platform. **END**

Hide pictures and videos in Vaulty

Too many uninvited eyes viewing the pictures and videos stored on your phone? Need a way to hide them? Use Vaulty to hide your personal stuff from the public gaze—camouflaged as a fake stocks app, which works just like a real stocks application that can't be viewed unless one enters the correct password.

Figure 7: Vaulty

Figure 8: Vaulty-1

You can rename and filter your videos and pictures, and a password recovery option is also available.

The latest version varies from device to device. A rating of 4.7 is impressive. It runs on Android 1.6 or above. I tried to run it on the Galaxy Note but, unfortunately, it didn't work.

Figure 9: Vaulty-2

Hopefully, the above-mentioned apps will be of use to you. Feel free to send me your feedback and suggestions. **END**
