

AI-Based Tools You Can Use for Network Data Analysis and Cyber Security

Here's a quick overview of AI-based open source tools that offer enhanced protection to networked systems against a range of cyber attacks.

Artificial intelligence (AI)-based applications using advanced chatbots are the norm today across industries like healthcare, retail and finance. The launch of ChatGPT by OpenAI has been followed by the release of many AI chatbots for multiple applications. Some of the major releases that followed ChatGPT include Gemini, Perplexity, Chatpdf, Bolt and Lovable. Numerous chatbots are currently under development and will soon be launched for multiple domains.

The global market size of AI was estimated at around US\$ 200 billion in 2023 and is projected to grow at a CAGR of around 36% between 2023 and 2030.
