

Red Hat honours four Indian companies at the APAC Innovation Awards 2025

Red Hat has announced the India winners of the Red Hat APAC Innovation Awards 2025, celebrating organisations that have applied open source technologies to drive transformation, scalability, and meaningful digital impact. Under the theme ‘Unlock what’s next’, the awards recognise 30 winners across the region, including four from India: Indian Bank, Tata Teleservices Limited (TTSL), Unity Small Finance Bank, and State Bank of India (SBI).

Indian Bank was recognised in the Cloud Native Development category for building India’s first private cloud by a public sector bank using Red Hat OpenShift Platform Plus. This foundation supports mission-critical banking services and accelerates the rollout of secure digital capabilities. Ashutosh Choudhury, executive director, Indian Bank, said: “At Indian Bank, our goal has been to build a modern, scalable foundation that can keep pace with the rapid evolution of digital banking. By working with Red Hat, we have gained the agility to scale resources efficiently, improve visibility across our systems, and deliver more reliable digital experiences for our customers.”

Tata Teleservices Limited (TTSL) received recognition for Digital Transformation and Hybrid Cloud Infrastructure through an open hybrid cloud approach that enhances operational agility. Anvize Rodrigues, CIO, TTSL, said: “Our collaboration with Red Hat is a key step in transitioning to a unified, open hybrid cloud foundation that brings speed, resilience, and innovation at scale.”

Unity Small Finance Bank and State Bank of India were also honoured for advancing digital banking through open, cloud-native platforms that improve reach, resilience, and service innovation across India’s financial ecosystem.

Sonatype launches its largest global R&D hub in Hyderabad

The Telangana IT and Industries Department has inaugurated a new global capability centre (GCC) established by US-based cybersecurity firm Sonatype in Hyderabad’s HiTech City. The facility, opened this November, represents Sonatype’s largest and fastest-growing research and development hub worldwide.

Currently employing 50 specialists, the company plans to expand the centre’s workforce to 200 deep-tech engineers, product leaders, data scientists, and AI experts by next year. The Hyderabad GCC will focus on advancing research in software supply chain security, AI and ML-based software security, cloud-native development, and open source intelligence.

“Hyderabad has quickly become one of the fastest-growing hubs for global capability centers, where leading companies are building and managing their most critical and innovation-driven work,” said Sanjay Kumar, special chief secretary for IT and industries.

“India is leading a global technology transformation, not only as a hub for engineering excellence, but as a model for how nations can embrace AI responsibly and securely,” said Bhagwat Swaroop, CEO, Sonatype, adding that Hyderabad has become a magnet for the world’s most innovative companies.
