

of Things (IoT). Its features include rule behaviour analytics, drag and drop interfaces, smart automation, data visualisation, integration with various services, and workflows.

Webots

<https://cyberbotics.com/>

Webots is a powerful and multi-featured robot simulator under free and open source distribution. This multi-platform software application can be used for robot simulation for Industry 5.0 applications in domains like pharmaceutical quality control, precision farming, predictive maintenance, real-time supply visibility, remote monitoring, resilient production systems, secure Industrial IoT (IIoT), skill augmentation platforms, smart agriculture, smart construction, smart logistics, smart and sustainable manufacturing, trust-centric systems, virtual factories, warehouse automation, waste minimisation, worker safety monitoring, and zero-defect manufacturing.

The banner for the OpenRemote website. At the top left is the OpenRemote logo, which consists of a circular icon with a stylized 'O' and the text 'openremote'. To the right of the logo is a navigation menu with links: 'Product', 'Service', 'Domains', 'Use Cases', 'Developers', and 'About'. Further right is a 'Demo' button. The background of the banner is a dark, atmospheric image of an airport tarmac at night, with a large airplane and ground service equipment visible. Overlaid on this background is the text: 'Build your IoT device management platform at scale, backed by professional services and the community' in a smaller font, followed by 'The 100% Open Source IoT Platform for Manufacturers and Integrators' in a large, bold, white font. At the bottom of the banner are two buttons: 'Manufacturer' and 'Integrator'.
