

```
# Base plate
mybase = Part.makeBox(100, 50, 10)

# Vertical plate
myvertical = Part.makeBox(50, 10, 60)
myvertical.translate(FreeCAD.Vector(0, 40, 10))

# Fuse plates
mybracket = mybase.fuse(vertical)

# Bolt holes
myhole1 = Part.makeCylinder(6, 10)
myhole1.translate(FreeCAD.Vector(25, 25, 0))

myhole2 = Part.makeCylinder(6, 10)
myhole2.translate(FreeCAD.Vector(75, 25, 0))

myhole3 = Part.makeCylinder(6, 10)
myhole3.translate(FreeCAD.Vector(25, 45, 30))

# Cut holes
mybracket = mybracket.cut(hole1)
mybracket = mybracket.cut(hole2)
mybracket = mybracket.cut(hole3)

# Add to document
myobj = mydoc.addObject("Part::Feature", "AutoBracket")
```

```
myobj.Shape = mybracket
```

```
# Update
mydoc.recompute()
```

The Python code can be directly executed in the console or with the macro in FreeCAD.

FreeCAD can be used for the design, viewing and simulation of 3D modelling in research and development activities. It offers all the features engineers and structure experts need, and no proprietary software is required for the job. **END**

As AI adoption grows, cloud platforms without strong ML management quickly become operational bottlenecks.

Choosing the right cloud management stack

There is no universal ‘best’ toolset.

The right cloud management stack depends on team size, regulatory constraints, workload type, and operational maturity. The real challenge is avoiding tool sprawl — adopting too many tools without a clear ownership model.

A small, well-integrated set of open source tools almost always outperforms a large, fragmented stack.

Looking ahead, cloud management is moving towards:

- Platform engineering teams
- Unified control planes
- AI-assisted operations
- Policy-driven automation

Open source will continue to lead this evolution, not because it is free, but because it is transparent, adaptable, and community-driven.

In 2026, the cloud itself is no longer the differentiator. Management is.

Organisations that will succeed are those that invest in open, consistent, and observable platforms — platforms that work across AWS, Google Cloud, Microsoft Azure, and beyond. Open source tools make this possible. They give teams control, clarity, and confidence in an increasingly complex cloud landscape. And in the long run, that matters far more than the logo on the console. **END**
