

Figure 4: Auto visualisation in Lux with toggle option

Figure 5: Distribution, occurrence and temporal visualisation in Lux

```
data = {
    «Product»: [«Laptop», «Laptop»,
    «Smart Watch», «Smart Watch», «Tablet»,
    «Tablet», «IoT Gadget», «IoT Gadget»],
    «Month»: [«January», « July », «
    January », «July», « July », «January»,
    « January », «July»],
    «Sales»: [220, 250, 220, 250, 90,
    90, 165, 180],
    «Profit»: [30, 45, 50, 90, 15, 20,
```

```
20, 45],
    «Units_Sold»: [10, 19, 10, 23, 6, 9,
```

```
13, 15]
```

```
}
```

```
df = pd.DataFrame(data)
```

```
# Visualization with Display using Lux
df
```

For data visualisation and plotting, software developers need to use special libraries like Seaborn, Matplotlib, Plotly, Folium, etc. By using Lux in Python, there is no need to integrate dedicated plotting and visualisation libraries. Lux itself provides all the features needed for dynamic visualisation and auto identification of the attributes required for data analytics.
