

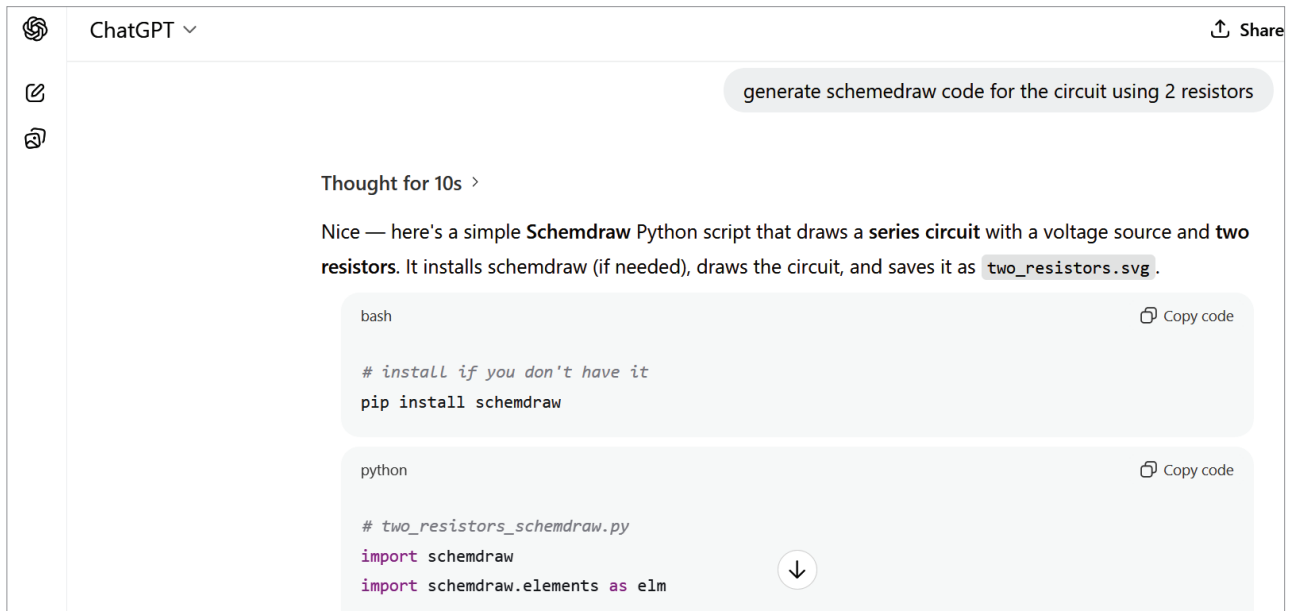

Figure 2: Generation of SchemDraw script using ChatGPT

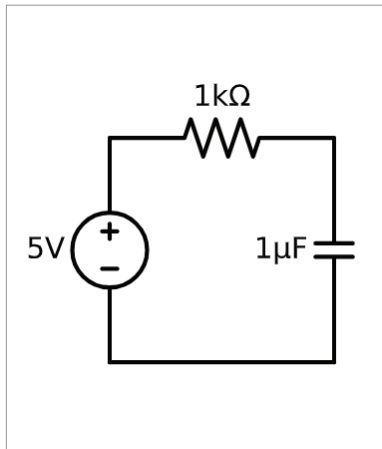

Figure 3: Circuit formation using SchemDraw

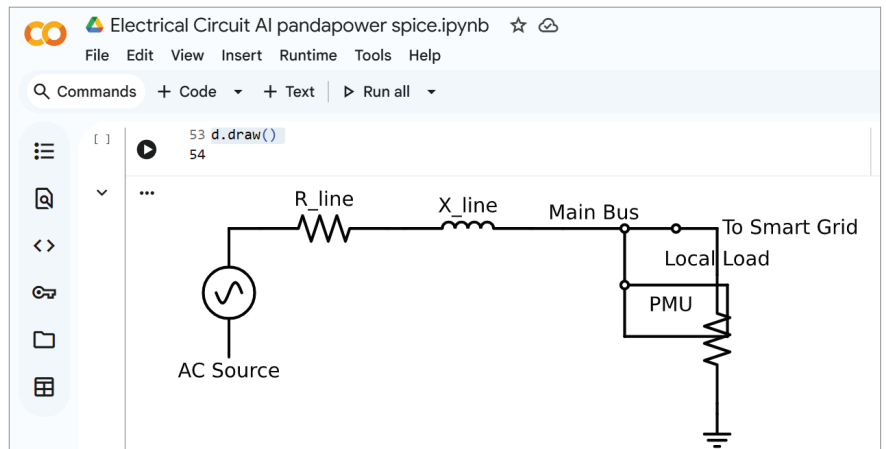

Figure 4: Generating a circuit on Google Colab using SchemDraw code

```
d += el.Capacitor().down().label('1μF')
# Connect back to source
d += el.Line().left().tox(d.elements[0].start)
d.draw()
```

The code for the phase measurement unit (PMU) with smart grid is:

```
import schemdraw
import schemdraw.elements as els
dr = schemdraw.Drawing()
dr.config(unit=2.5)
# Source (AC supply)
dr += els.SourceSin().label('AC Source', loc='left')
dr += els.Line().right().length(0.6)
```

```
# Transmission line impedance
dr += els.Resistor().right().label('R_line')
dr += els.Line().right().length(0.3)
dr += els.Inductor().right().label('X_line')
dr += els.Line().right().length(0.6)
# Bus
dr += els.Line().right().length(1.2).label('Main Bus',
loc='top')
dr += els.Dot(open=True) # Bus node
# Branch for PMU
d.push()
dr += els.Line().down().length(1.1)
dr += els.Dot(open=True)
# --- PMU drawn as a rectangle with lines ---
x, y = d.here # current position
```
