

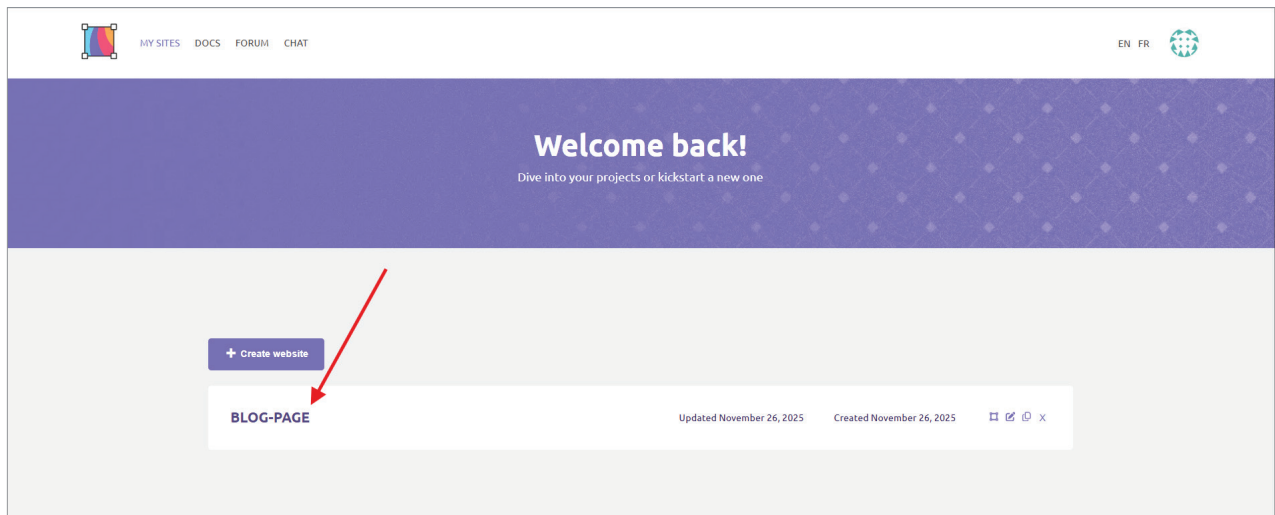

Figure 3: Dashboard

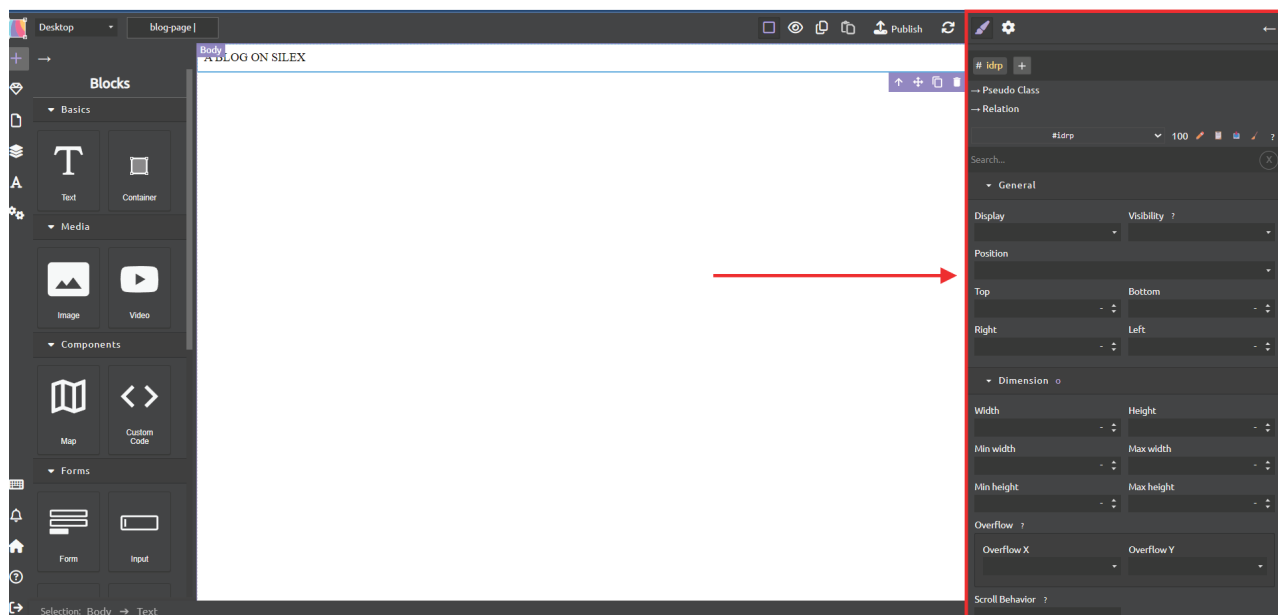

Figure 4: Open style manager

option to upload the image as shown in Figure 5.

After your selected image gets loaded, click on it to make it appear on the web page.

Now, let us include the content for our blog page. I have included the following sentence:

“Silex is a free and open-source WYSIWYG (What You See Is What You Get) website builder.”

There are many more elements that we can include on our site. Now let us see how to include custom elements in our site. For that, drag the *Custom Code* option and drop it on the exact position you want. Now, write the code you would like to; I am including the following code to include a simple feature card in our site.

```
<style>
/* * -----
 * CSS for the Feature Card
 * -----
 */
.osfy-card {
  /* Base Styling */
  max-width: 300px;
  margin: 20px auto; /* Centers the card */
  padding: 20px;
  text-align: center;

  /* Colors and Aesthetics */
}
```
