

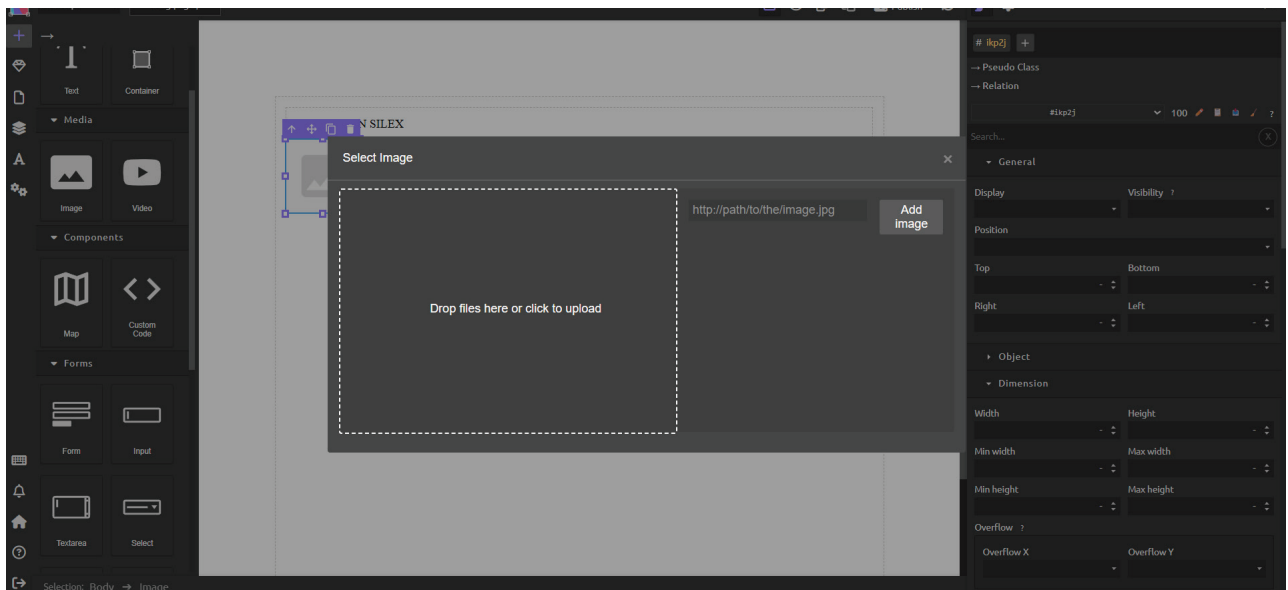

Figure 5: Image selection option

```
background-color: #ffffff; /* White background */
border: 1px solid #e0e0e0; /* Light gray border */
border-radius: 12px;

/* Shadow and Transition for Effect */
box-shadow: 0 4px 12px rgba(0, 0, 0, 0.1);
transition: all 0.3s ease-in-out; /* Smooth transition
for hover effects */
}
```

```
/* Hover Effect */
.osfy-card:hover {
  /* Lifts the card */
  box-shadow: 0 10px 25px rgba(0, 0, 0, 0.2);
  /* Slightly scales the card */
  transform: translateY(-5px) scale(1.02);
}
```

```
.osfy-card h3 {
  color: #007bff; /* Blue heading color */
  margin-top: 0;
}
```

```
.osfy-card button {
  background-color: #28a745; /* Green button */
  color: white;
  border: none;
  padding: 10px 20px;
  border-radius: 5px;
  cursor: pointer;
  margin-top: 10px;
}
```

```
</style>
```

```
<div class="osfy-card">
  <h3>Static Site Power</h3>
  <p>This card demonstrates custom code integration. Notice
the clean shadows and the subtle lift when you hover over
it!</p>
  <button>Read More</button>
</div>
```

Now, after clicking on *Save*, our blog looks like the image shown in Figure 6.

Ensuring a responsive design

The ability to look great on any device from a large monitor to a small smartphone is non-negotiable for modern websites. Silex makes this core principle of responsive design accessible visually, without writing complex media queries.

In Silex, always start by inserting containers or sections and placing your content (text, images, media) inside them. These containers are the backbone of your layout and, by default, often behave responsively, automatically scaling their width to the available screen space.

To avoid frustrating horizontal scrolling on your mobile phone, you must minimise fixed pixel sizes. Instead, use relative measurements. Set the width of main content containers and large images using percentages (e.g., 100% or 90%). This ensures the elements shrink and grow proportionally to the viewer's screen, maintaining an appropriate fit.

The 'Breakpoint Selector' is Silex's most powerful responsive tool. This feature, typically found at the top of the editor, allows you to switch between viewing modes
