

changes include renamed and updated car hacking toolset, Kali Menu and UI refresh, updates to Kali NetHunter, and additional hacking tools. A notable change is the renaming of the CAN Arsenal to CARsenal, reflecting its expanded focus on car hacking. The toolkit now boasts a more user-friendly interface to streamline automotive security research.

The Kali team has also added new tools, including *hlcand*, which is modified *slcand* for ELM327 use, and *VIN Info* to decode your VIN identifier. *ICSim* provides a great simulator to play with VCAN and test the CARsenal toolset without needing hardware.

To improve tool discoverability, the Kali Menu has been restructured to align with the MITRE ATT&CK framework, benefiting both red and blue teams. The previous menu, inherited from WHAX and BackTrack, lacked scalability and made finding related tools more difficult.

GNOME has been upgraded to version 48, bringing performance enhancements, notification stacking, dynamic triple buffering, and a refreshed image viewer. The update also introduces digital well-being features, including battery health tools and HDR support.

Additional interface improvements include sharper themes and the replacement of the Evince document reader with the sleeker Papers app.

Ubuntu 25.10 'Questing Quokka' drops support for GNOME on Xorg

Canonical has officially announced that Ubuntu 25.10 'Questing Quokka' will remove support for the GNOME on Xorg (X11) session, making Wayland the sole display server protocol for the release.

This change follows the GNOME project's decision to phase out Xorg support in favour of Wayland, citing a more secure, modern, and performant desktop experience. As a result, Ubuntu will no longer offer the 'Ubuntu on Xorg' session starting with version 25.10, and all GNOME Shell and Mutter-based sessions will be Wayland-only. Canonical developers noted that maintaining both X11 and Wayland sessions creates technical debt and hampers innovation. With GNOME 49—the default desktop in 25.10—also dropping Xorg support, this transition aligns with broader upstream goals.

"Over the past several cycles, the Wayland experience has matured significantly," said Jean Baptiste Lallement of Canonical. "We now see better support for NVIDIA drivers, improved graphics isolation, stronger security, and enhanced touch and HiDPI capabilities."

As a result, users will no longer be able to select GNOME on Xorg at login, nor run X11-based desktop environments or applications within the default session.

Ubuntu 25.10 is scheduled for release on October 9, 2025, and will introduce a range of cutting-edge technologies, including GNOME 49 and Linux Kernel 6.17
