

Figure 5: Desktop environment

```
mozilla.org/apt mozilla main" | sudo tee -a /etc/apt/sources.
list.d/mozilla.list
!sudo apt-get update
!printf "49\n1\n17\n" | apt-get install -y xfce4 xfce4-
goodies tightvncserver novnc websockify firefox/mozilla
!export USER=root
!printf "password\npassword\n\n\n" | vncpasswd
!sudo vncserver
!export display=:1
!websockify -D --web=/usr/share/novnc/ 6080 localhost:5901
!npm install -g localtunnel
import subprocess
process = subprocess.Popen('lt --port 6080'.split(),
stdout=subprocess.PIPE, stderr=subprocess.PIPE, bufsize=0)
output = process.stdout.readline().decode('utf-8').strip()+'
vnc.html'
url = output[output.find('https'):]
vncpassword='password'
import requests
ltpassword=requests.get('https://loca.lt/mytunnelpassword').
```

```
text
from IPython import display
display.clear_output()
display.HTML(f'<h1>LT Password: {ltpassword}</h1><br><h1>VNC
Password: {vncpassword}</h1><br><iframe style="border:
0; width: 100%; aspect-ratio: 16/9; overflow: auto;"
src="{url}"></iframe>')
```

When this code is run, we are presented with the desktop environment.

This is how we can use a container on Google Colab as an ephemeral cloud PC that can be accessed from any device including tablets and smartphones. **END** 🐧
