

with a secure architecture. That includes securing not only the devices themselves but also the platforms and servers they communicate with. End-to-end security from device to cloud can significantly reduce vulnerabilities.

There is growing interest in AI and IoT careers. While it may appear that fewer jobs are available, the reality is the opposite: opportunities exist for those who take proactive steps. Start by building a platform and testing it for scalability, security, and availability. Leading cloud providers such as AWS, Microsoft Azure, and Google Cloud offer microservices specifically designed for secure development. A hands-on approach can greatly enhance employability.

One innovative idea, suggested by a few *EFY* subscribers, involves simulating AI-driven interviews for specific roles, such as a former engineer at Synopsys in Bengaluru. In this concept, a candidate uploads their resume, and an AI engine generates interview questions one at a time using real-world data from platforms like Reddit, Quora, or Glassdoor. The candidate must answer each question before the next appears, mimicking real interview pressure and helping them prepare more effectively.

While such tools are promising, they must be used ethically and responsibly. There have been instances where candidates misuse AI during remote interviews by reading answers directly from a chatbot on-screen. This defeats the purpose of the exercise and undermines genuine skill-building.

It is now up to each of us to assess where we stand, how fast we want to grow, and how often we reflect—be it daily, weekly, or yearly.

So, focus on skills. Resources are everywhere. OpenAI, Google, and many others now offer free academies and courses—take advantage of them. Most importantly: Dream it. Believe it. Achieve it. Believe in your journey, take steady steps, and the results will follow. **END** 🐧

Based on a session titled, 'How to Build Your Global Career in IoT, Embedded Systems & AI' delivered by Abhijeet Desai, Group Project Manager, HCLTech America, at the EFY Expo held at the Auto Cluster Exhibition Center, Pune, on May 17, 2025. It has been transcribed and curated by Shubha Mitra, assistant editor at the EFY Group.

DIY KIT: Agriculture IoT & AI

Want to create exciting IoT projects for agriculture use cases or agri-IoT projects?

This kit provides everything you need to create typical IoT for agriculture (aka agri IoT) projects.

KIT INCLUDES:

- Soil Sensor
- GSM Module
- Relay Module
- IndusBoard Coin

POWERED BY

IndusBoard
COIN

Super small sized development board that enables you to create solutions for many use-cases where small size is super important.

SPECIAL INTRO PRICE

₹2,149 (Inclusive of GST)
