

Bias detection: Tools to evaluate and reduce unfairness in model outputs.

Auditability: Governance frameworks to track decisions and ensure compliance with laws like India's Digital Personal Data Protection Act.

The skills shift

Building AI applications, especially agentic ones, requires a different skillset from traditional software engineering. Beyond prompt engineering, teams must master:

Orchestration: Coordinating multiple models and APIs to achieve complex goals.

Memory management: Maintaining context across tasks and time.

Tool integration: Allowing AI to call external systems safely.

Continuous feedback: Iteratively improving models based on user and system feedback.

The end of SaaS as we know it

As Satya Nadella put it: "SaaS is dead."

The static, one-size-fits-all nature of traditional SaaS is giving way to AI-native systems that shape themselves to each user's needs in real time. Tomorrow's business applications will feel less like software products and more like collaborative team members, anticipating needs, initiating actions, and learning continuously.

The road ahead

For India to lead in AI, we must:

- **Invest in talent:** From primary education in computational thinking to advanced AI research.
- **Build open ecosystems:** Avoiding lock-in, encouraging competition, and enabling interoperability.
- **Focus on ethics:** Ensuring fairness, transparency, and accountability from design phase onwards.

- **Align hardware and workloads:** Co-designing chips and software for optimal AI performance.

AI is the most powerful tool humanity has ever built. In the right hands, it can solve problems once thought intractable such as climate modelling, drug discovery, and literacy at scale. For India, this is the time to pilot aggressively, scale what works, and build not just for our market, but for the world. History does not remember those who were merely ready. It remembers those who acted. **END** 🐧

The article is based on the AI DevCon seminar 'AI Inside For A New Era', featuring insights from Anand Kulkarni, customer engineering lead at Intel. It has been transcribed and curated by Vidushi Saxena, journalist at OSFY.

Job Guaranteed.

You don't need a training institute. Just do it yourself.

WORK WITH OPEN SOURCE.

www.opensourceforu.com

Demand for Open Source is sky rocketing. Be it for managing IT infrastructure or development of software —Open Source experts are what organisations are seeking. Develop expertise in an Open Source stack, and watch your career graph zoom.

You don't need a training institute for this. You can do it yourself. And, *Open Source For You* can be your friend and a guide through this journey.
