

Table 1:

0	None	0	None
1	Amount of items	1000	
2	Pagination	✓	
3	Items per page	max 20	
4	Requires JavaScript	x	

Table 2:

0	None	1	None
1	Default		Microdata and pagination
2	Scroll		infinite scrolling pagination
3	JavaScript		JavaScript generated content
4	Delayed		Same as JavaScript but with a delay (?delay=10...
5	Tableful		a table based messed-up layout
6	Login		login with CSRF token (any user/passwd works)
7	ViewState		an AJAX based filter form with ViewStates
8	Random		a single random quote

Figure 4: Extracted tables

```
In [23]: link_list
Out[23]: ['http://books.toscrape.com/',
'http://books.toscrape.com/',
'http://books.toscrape.com/',
'http://quotes.toscrape.com/',
'http://quotes.toscrape.com/',
'http://quotes.toscrape.com/scroll',
'http://quotes.toscrape.com/js',
'http://quotes.toscrape.com/js-delayed',
'http://quotes.toscrape.com/tableful',
'http://quotes.toscrape.com/login',
'http://quotes.toscrape.com/search.aspx',
'http://quotes.toscrape.com/random']

In [24]: sd.get(link_list[0])
```

Figure 5: Extracted hyperlinks

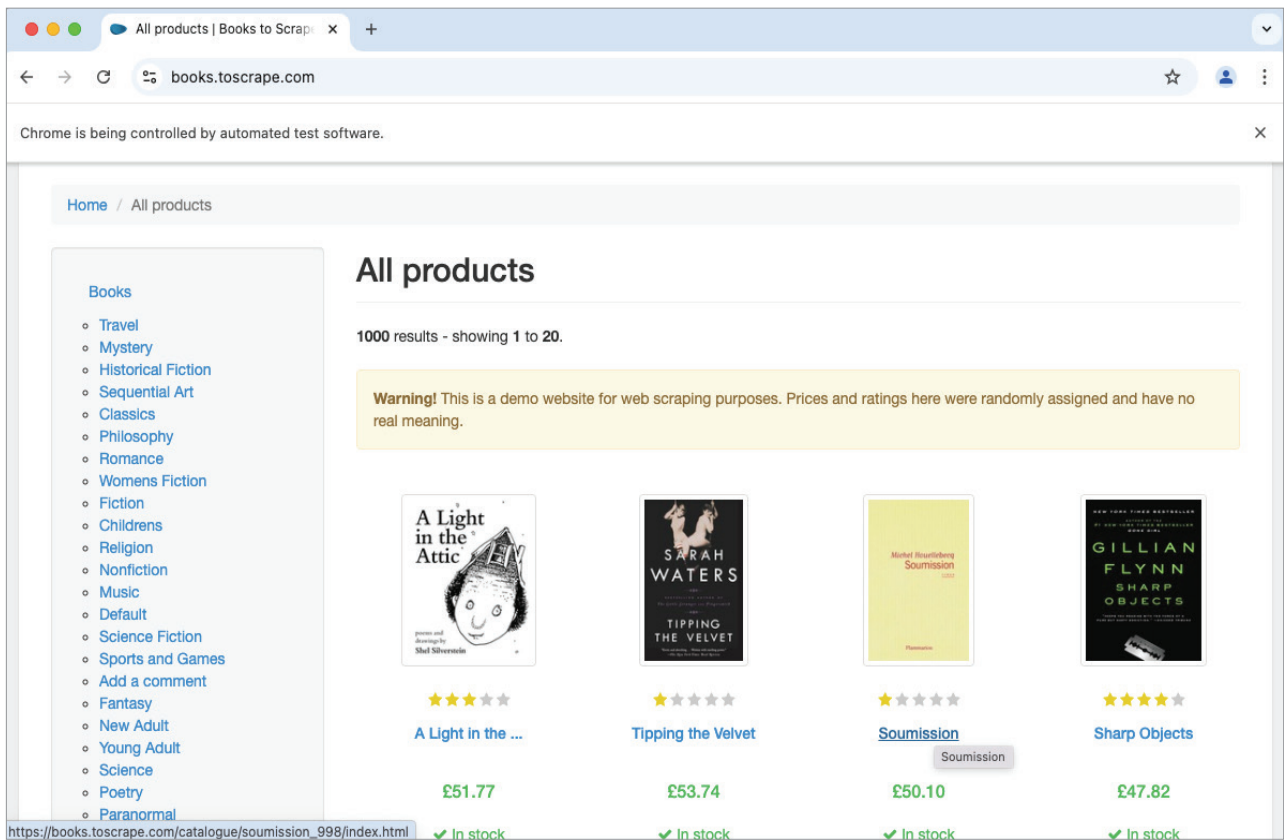

Figure 6: Exploring other links

using the following code. The output is shown in Figure 5.

```
links = sd.find_elements(By.TAG_NAME, "a")
link_list=[]
for index, link in enumerate(links):
    href = link.get_attribute("href")
    link_list.append(href)
```

This will give us the list of the links that are there in the entire page. We can follow the same process with each of these links as shown in Figure 6.

There are so many other options that you can explore. Basically, every HTML tag can be read into Selenium and explored. You can look at the official documentation for more details. The deeper you go into web scraping and the more you understand it, the more fun you will have working with it! **END** 🐼
