

Figure 5: Subscription analysis generated by Azure Copilot

detailed breakdowns of costs, identify the services or resources contributing most to your bill, and receive recommendations for savings opportunities. By making cost analysis a conversational process, Copilot helps stakeholders understand financial trends and empowers them to make informed budgeting decisions.

Resource management: With Azure Copilot, handling cloud assets becomes intuitive and efficient. Whether you need to provision new resources, modify configurations, or decommission unused assets, Copilot guides you through each step with clear instructions. You can perform actions such as creating databases or scaling compute instances by

describing your requirements in natural language. Copilot's ability to interpret and act on these requests ensures that resource management processes are both accessible and accurate.

By leveraging Azure Copilot's advanced features, organisations can enhance their cloud operations, reduce costs, and ensure compliance, ultimately driving success in their cloud initiatives. **END** 🐧
