

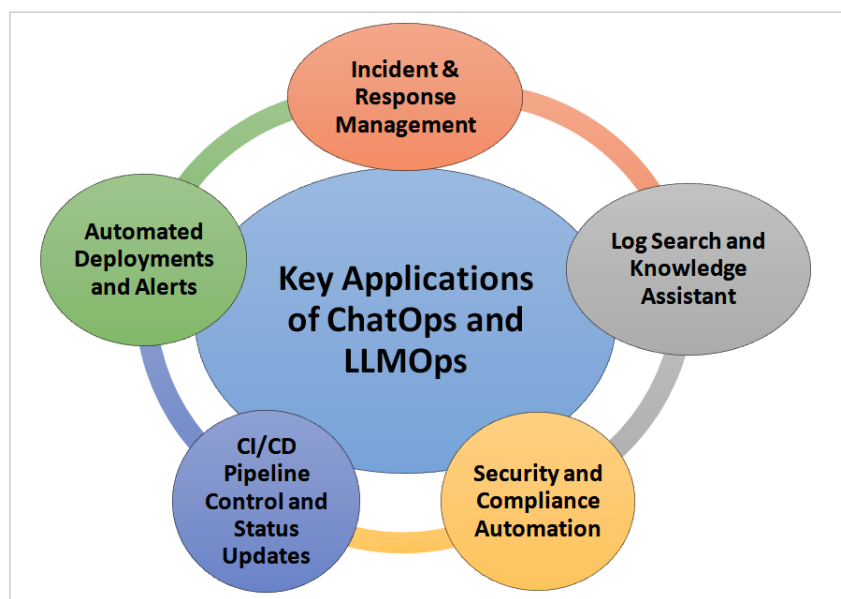

Figure 3: Key applications of ChatOps and LLMOps

As an example, in Slack, to restart the payment server, there is no need to log in and open the dashboard separately, as the following will work:

`@deploybot restart payment-server-suite`

ChatOps and LLMOps are useful and effective for:

- DevOps teams deploying the applications and server
- Helpdesks dealing with access requests, live troubleshooting, and

password resets

- Security and forensic teams that raise alerts and must take quick action

The advantages of using ChatOps and LLMOps for automated tasks and delivery include:

- Reduced downtime
- No need for technical experts at odd hours
- LLMs can learn from existing infrastructure and give better suggestions on time
- No need for manual checking and troubleshooting
- No scope of human error; automated deployment and error correction
- Dynamic problem solving on real-time infrastructure

Use of Ollama in ChatOps and LLMOps

Ollama (<https://ollama.com>) is a powerful tool that can be used offline for the development and deployment of custom AI chatbots (including working with DevOps). It is freely available on

Table 1: Using ChatOps and LLMOps in real world business scenarios

Application area of ChatOps and LLMOps	Real world example of ChatOps with LLMOps
Incident management	<code>@mybot restart key-backend-server for fixing an outage</code>
System monitoring and alerts	<code>Disk space monitoring on server2 is more than 85%</code>
Automated documentation access	<code>@myhelpbot automated restart the database with safe patterns</code>
Code review and pull requests	<code>@mybot new pull request approved</code> <code>@mybot new commit performed</code>
Team collaboration and notifications	<code>@myteambot display summaries of video conferencing sessions and live meeting</code>
CI/CD pipeline control	<code>@mydeploybot deploy application-version2025 to production</code>
DevSecOps and policy alerts	<code>@mysecuritybot display IP addresses and locations of unauthorized login attempt detected on server1</code>
Chat based troubleshooting and data queries	<code>@mydatabot display current sales in the particular region</code>
User access and onboarding	<code>@myaccessbot GitHub access grant to NewDeveloper for 9 days</code>
Log search, analytics and error reports with summaries	<code>@mylogbot display key error messages on payment gateway service</code>
