

Table 3: Comparing OpenSearch with other popular tools

Parameter	OpenSearch	ELK Stack	Prometheus+Grafana
Type of tool	Open source	Commercial+OSS	Open source
AI/Ops focus	Medium	Medium to high	Low
Anomaly detection	Built-in via plugin (RCF)	Machine learning module; subscription based	It supports only basic alerting
Multi-entity detection	Supported	Subscription based	Not supported
Alerting	Built in facility, which is pluggable.	It has a facility in the form of Watcher, which is subscription based	It contains basic rules only for alerting
Cost	Free	Machine learning requires subscription	Free
Custom ML models	Via ML Commons plugin	Subscription based	Not supported

- **Action:** It indicates how to respond when a trigger is triggered (send a webhook, Slack message, email, etc).
- **Destination:** It is a reusable notification channel.

Table 3 compares OpenSearch with the well-known ELK Stack and Prometheus+Grafana tools.

Real-time anomaly detection is essential for maintaining system stability, reducing downtime, and proactively resolving performance issues in the quickly changing field of AI-powered DevOps (AI/Ops). OpenSearch allows for unsupervised anomaly identification on time-series data without the need for intricate external setups because of its inbuilt support for Random Cut Forest (RCF) algorithms. Both small- and large-scale DevOps settings can benefit greatly from its smooth interface with security plugins, visual dashboards, and alerting systems. Compared to other tools

such as the ELK Stack and Prometheus+Grafana, OpenSearch stands out for its openness, flexibility, built-in anomaly detection, and support for multi-entity models — all of which are essential for AI/Ops strategies. **END** 🐧
