

exacerbate existing inequalities. It calls for measures to ensure that workers are trained and equipped to succeed in the AI-driven economy. To achieve this goal, the order calls for the development of workforce training programs, the promotion of apprenticeships and other forms of on-the-job training, and the establishment of mechanisms for worker participation in the development and deployment of AI systems. The order also encourages the use of AI to improve working conditions and increase productivity.

Advancing equity and civil rights in AI

The fourth guiding principle of the executive order emphasises the importance of advancing equity and civil rights in the development and use of AI. This principle recognises that AI has the potential to perpetuate and exacerbate existing biases and inequalities, calling for measures to ensure that AI is developed and used in a fair and equitable manner. To achieve this goal, the order calls for the development of AI standards and best practices that promote fairness, transparency, and accountability, as well as mechanisms for identifying and mitigating bias in AI systems. It also encourages the use of AI to promote diversity and inclusion in the workplace and in society at large.

Protecting user interests in AI and AI-enabled products

The fifth guiding principle of the executive order emphasises the importance of protecting the interests of Americans who use, interact with, or purchase AI and AI-enabled products in their daily lives. This principle recognises that AI has the potential to impact consumers in a variety of ways. It calls for measures to ensure that consumers are protected from harm and have access to accurate and transparent information about AI systems. To achieve this goal, the order

calls for the development of consumer protection policies and regulations, as well as mechanisms for monitoring and enforcing these policies. It also encourages the use of AI to improve consumer experiences and increase access to information.

Protecting privacy and civil liberties in AI

The sixth guiding principle of the executive order emphasises the importance of protecting Americans' privacy and civil liberties as AI continues to advance. This principle recognises that AI can collect and analyse vast amounts of personal data and calls for measures to ensure that this data is collected, stored, and used in a manner that respects individuals' privacy and civil liberties. To achieve this goal, the order calls for the development of privacy-enhancing technologies and other measures to protect sensitive data, as well as mechanisms for monitoring and enforcing privacy policies. It also encourages the use of AI to enhance privacy and security.

Regulating and governing AI risks

The seventh guiding principle of the executive order emphasises the importance of managing the risks associated with the federal government's use of AI and increasing its internal capacity to regulate, govern, and support responsible use of AI. This principle recognises that the federal government is a major

user and developer of AI, calling for measures to ensure that AI is developed and used in a manner consistent with public interest. To achieve this goal, the order calls for the development of AI policies and regulations that promote transparency, accountability, and public participation, as well as mechanisms for monitoring and enforcing these policies. The order also encourages the use of AI to improve government services and increase efficiency.

Promoting innovation and competition with leadership

The eighth guiding principle of the executive order emphasises the importance of promoting innovation and competition in the development and use of AI. This principle recognises that AI has the potential to drive economic growth and innovation, and calls for measures to ensure that these benefits are shared fairly and equitably. To achieve this goal, the order calls for the promotion of public-private partnerships, the development of AI standards and best practices, and mechanisms for sharing data and other resources. It also encourages the use of open data and open source software to promote collaboration and innovation.

These principles aim to ensure that AI is developed and used in a responsible and safe manner, while also promoting innovation, competition, and collaboration. They also prioritise supporting American workers, advancing equity and civil rights, protecting consumers,
