

Figure 2: US government calls for action on development and use of AI

and safeguarding privacy and civil liberties. The executive order emphasises that these principles should be adhered to by executive departments and agencies while considering the views of other agencies, industry, members of academia, civil society, labour unions, international allies and partners, and other relevant organisations.

These calls for action aim to promote safe, responsible, fair, privacy-protecting, and trustworthy AI systems; support small businesses in innovating and commercialising AI, advance responsible global technical standards for AI development and use outside of military and intelligence areas, and address cross-border and global AI risks to critical infrastructure.

‘Red Teaming’ is a common practice where organisations hire ethical hackers to emulate real attacks against enterprise systems to ensure appropriate security measures are in place. This practice is evolving to

ensure the adoption of responsible AI. OpenAI has created a community for the open source world to collaborate and communicate in the development of a framework with a network of industry experts. Although private organisations are going to invest in similar efforts, it’s encouraging to see rapid developments in the open source community for establishing a platform for individuals to join and contribute to the positive impacts of AI.

In conclusion, AI is a transformative force that unlocks the creative potential within all of us. By harnessing the power of AI responsibly in the data age, we can unleash our imagination, redefine creativity, and embark on a journey of boundless innovation. It’s the dawn of a new era as technology advances and industries adopt responsible AI, making it an integral part of our daily lives. **END** 🐧
