

```
# Stacking multiple embeddings
stacked_embeddings = StackedEmbeddings([
    FlairEmbeddings('news-forward'),
    FlairEmbeddings('news-backward'),
    BertEmbeddings()
])

stacked_embeddings.embed(sentence)

# Inspecting the embeddings
for token in sentence:
    print(token)
    print(token.embedding)
```

State-of-the-art in several NLP tasks

Flair has proven its mettle in achieving state-of-the-art results in several NLP benchmarks. It is particularly effective in tasks where understanding the context is key, such as in sentiment analysis and text classification.

Flexible and extensible

The framework is designed for flexibility, allowing users to easily add new corpora, embeddings, or even their own custom NLP models. This extensibility makes Flair a highly adaptable tool for a variety of NLP projects.

Vibrant community and development

Backed by a growing and active community, Flair is continually evolving. Its development is driven by real-world applications and the latest research in NLP, ensuring it stays relevant and effective.

Flair is a potent framework for those looking to explore the depths of contextualised NLP. Its innovative approach to embeddings makes it a valuable asset in the toolkit of any NLP practitioner aiming for a deeper understanding of language in context.

And there you have it – a tour through five of the latest and most innovative frameworks in NLP. Each brings its unique strengths to the table, opening up new possibilities in the world of language processing and understanding. **END** 🐼
