

Open Source Software Adoption on the Rise: Insights from a Survey

In a recent survey on open source software, companies are clearly showing a preference for this dynamic technology. The survey sheds light on usage patterns, challenges faced, and future prospects.

In this era of digitisation, the use of open source software continues to gain momentum. This is what the Open Source Survey 2023-24 conducted by Ashnik, a leading open source consulting and services company headquartered in Singapore, revealed. The survey delved deep into the growing trust in open source platforms highlighting the reasons behind this trend, which include cost-efficiency, customisation freedom, and enhanced security.

Why the buzz around open source software?

The findings from the survey are indeed telling. A whopping 96% of its participants said they were gearing up for an uptick in the adoption of open source platforms. For 44% of respondents, the lure lies in the innovation and security prospects offered by open source, suggesting that these platforms not only hold the promise of more significant innovative avenues but also ensure minimised

security vulnerabilities. Meanwhile, 43% of the respondents find appeal in its cost-effectiveness, deeming it a more budget-friendly software alternative. The rest, making up 13%, valued the community engagement facet, which fosters and encourages heightened collaborative endeavours.

The challenges ahead

However, when it comes to the seamless assimilation of open source platforms into established organisational frameworks, a few challenges emerge. Thirty per cent of respondents voiced their worries regarding potential security glitches during the integration phase, while

Conducted by the Ashnik team, the Open Source Survey 2023-24 collected data from around 150 South Asian and Indian enterprises.

Open Source is being adopted by Organisations for the following key reasons in 2023-24

44% of participants choose Open Source technologies to enable **Faster Innovation and Higher Security**

43% chose Open Source to achieve higher **Cost Efficiency** in alignment to keeping IT budgets optimal

13% for improved **Community Involvement and Collaboration**
