

If you want to permanently install the app, return to your web browser, select 'Build' and click 'Android App(.apk)'. After compilation a QR code will appear. Scan it using the mobile as before and follow the screen instructions. The app will then be installed permanently.

Adding an extension

We are not finished yet. One problem with the above code is the screen's tendency to enter sleep mode after the set time. To maintain the screen's continuous operation, we need to use an extension. The preferred extension for this purpose is 'TaifunTools' from <https://puravidaapps.com>. Download the extension and save it to a folder. Return to the browser, and log in if you have already logged out. Switch to 'Designer' mode and in the *Palette*, you will find the last item is 'Extension'. Click on it to expand and reveal the 'Import

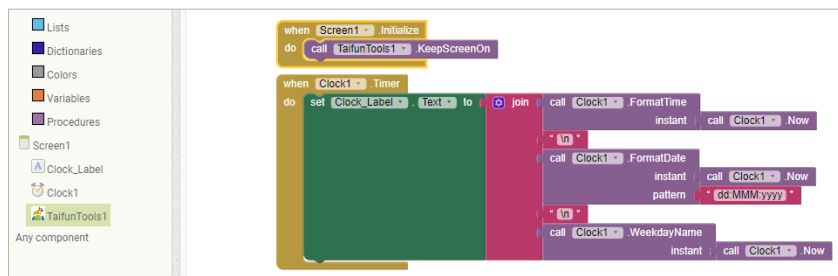

Figure 14: The complete app

extension'. Click again and select *Choose File*, specifying the path and file name of the extension and import.

Drag 'TaifunTools' into the *Viewer*, where it will appear as a non-visible component. Switch to *Blocks* mode and in the *Blocks* pane, select 'Screen1'. Drag the 'when Screen1.

Initialize' block into the *Viewer*. Click on 'TaifunTools1' and drag 'call TaifunTools1.KeepScreenOn' to connect to 'when Screen1.Initialize'.

Figure 14 shows the final version of the app, which will keep the screen always on. You can compile and install the same, as described earlier. **END!**
