

```

    "QueueConfigurations": [
      {
        "QueueArn":
          ""$SQS_QUEUE_ARN"",
        "Events":
          ["s3:ObjectCreated:*"]
      }
    ]
  }'

```

In the above command, we have configured the notification settings, as these associate our S3 bucket with the SQS queue specified by the ARN we configured before, and set the events that will trigger notifications, such as object creation.

You can now easily trigger a notification by adding some dummy content in your S3 bucket:

```

$ echo "Hello" > app.txt
$ cat app.txt
Hello
$ aws --endpoint-url=http://localhost:4566 s3 cp app.txt
s3://$BUCKET_NAME
upload: ./app.txt to s3://s3-event-notification/app.txt

```

You can use the Queue URL we retrieved before to check for new notifications coming from our S3 bucket:

```

$ aws --endpoint-url http://localhost:4566 \
  sqs receive-message \

```

```

--queue-url http://localhost:4566/000000000000/queue-
notification \
| jq -r '.Messages[0].Body' | jq .

```

In the JSON returned, you will find an object (file) named *app.txt* with the eventVersion and eventSource parts of the metadata associated with the SQS record.

LocalStack integrates with many AWS integrations — Cloud Development Kit (CDK), CloudFormation, Serverless Application Model (SAM), language SDKs, and third-party integrations such as Terraform, Pulumi, Architect, and more! With LocalStack, you can continue building your AWS apps and infrastructure by cutting down on your cloud costs and improving the efficiency of your development and testing loops.

In this article, we've discussed LocalStack and how to build a simple AWS integration entirely on your local machine. We hope this article helps you start with LocalStack and accelerates your development workflow. You can further explore LocalStack on its website and in its documentation.  **END**

He has previously worked at Red Hat, HackerRank, and Quansight. He is deeply passionate about cloud and serverless development, including DevOps, web engineering, and using technology to mitigate climate change.

OSFY Magazine Attractions During 2023-24

Month	Theme
March 2023	Security, Network Management and Monitoring
April 2023	Open Source Programming (Languages and tools)
May 2023	Cloud Special: Everything from management to implementation
June 2023	AI, Deep learning and Machine Learning
July 2023	Database management and Optimisation
August 2023	Mobile/Web App Development, Optimisation and Security
September 2023	DevOps Special
October 2023	Blockchain and Open Source
November 2023	Open Source and IoT and Edge
December 2023	All About Data Management
January 2024	Containers and Managing Containers
February 2024	Open Source on Windows and Best in the world of Open Source (Tools and Services)
