

```
$ sudo apt install -y software-properties-common
$ sudo add-apt-repository cloud-archive:wallaby
$ sudo apt update
$ sudo apt install -y openstack-dashboard
```

Configure networking: You may need to configure your networking settings based on your OpenStack deployment requirements. This involves setting up network bridges, configuring network interfaces, or other network-related settings. The following command is executed for configuration:

```
$ sudo dpkg-reconfigure openstack-dashboard
```

The networking configuration of our deployed OpenStack architecture is shown in Figure 2.

Configure authentication: OpenStack uses

authentication mechanisms such as Keystone for managing users and roles. You'll need to configure authentication settings based on your deployment requirements, including setting up users, roles, and authentication backends.

Start OpenStack services: Give the following command to start OpenStack services:

```
$ sudo systemctl enable apache2
$ sudo systemctl start apache2
$ sudo systemctl enable memcached
$ sudo systemctl start memcached
$ sudo systemctl enable uwsgi
$ sudo systemctl start uwsgi
$ sudo systemctl enable horizon
$ sudo systemctl start horizon
```

Access OpenStack dashboard: You can now access the
