

developments, maintaining a state-of-the-art that is stable and secure. This gives us enough time to foresee and address interoperability concerns.

Q. What role does open source play for startups and defining their go-to-market strategies?

A. Open source plays a key hiring role within startups, making it easier for them to hire engineers who need less training and, in turn, helping teams iterate faster on their go-to-market strategies that are tied to feature launches. The other benefit continues to be cost.

Q. Who looks after the open source compliance and licensing domain at Clari?

A. Our legal and security teams do so.

Q. Does Clari contribute to any open source projects?

A. We have been contributing to Netflix Conductor.

Q. Can you recollect and share your first encounter with open source?

A. Linux was my first and most memorable encounter with open source. This really sunk in when I was able to modify a part of the file system to be able to work over FTP.

Q. What exciting plans do you have coming up on Clari's tech roadmap?

A. Building custom models for a large set of enterprise customers poses a challenge in efficiently serving these sizable models, presenting a complex infrastructure issue. Maintaining observability is crucial to prevent model drift and track performance. The challenge extends to serving these models at a low cost, as powerful vCPUs can lead to substantial AWS bills. Traditional keyword search methods like BM25 fall short in answering nuanced questions such as, 'Why did we lose this deal?' based on call transcripts. Current LLMs have limitations due to their quadratic time complexity. Clari plans to tackle all these challenges to unlock the potential for significant advancements in product capabilities. **END** 🐧
