

and system settings. Subsequent users signing up will have their accounts set to pending status and will require approval from the administrator to access the platform functionalities.

Navigating the Ollama WebUI interface features

The Ollama WebUI is designed with an intuitive interface, drawing inspiration from ChatGPT for a user-friendly experience. It features a responsive design, making it seamlessly usable on both desktop and mobile devices. The interface has several key features as listed below.

- **Code syntax highlighting:** Enhances code readability, making it easier for developers to work with code snippets
- **Full markdown and LaTeX support:** Offers comprehensive formatting capabilities for a wide range of content creation needs
- **Multiple model support:** Allows users to switch between different chat models based on their specific requirements
- **Many model conversations:** Engages with various models simultaneously for a multifaceted conversational experience
- **Regeneration history access:** Users can revisit and explore their entire regeneration history
- **Chat history:** Provides access to and management of the conversation history
- **Import/export chat history:** Facilitates moving chat data in and out of the platform for backup or analysis

Example queries for content creation and developer assistance

The Ollama WebUI supports a variety of language models, each tailored for different use cases.

- **TinyLlama:** This model is ideal for applications with limited computational and memory resources.
 - **Prompt for content creation:** ‘Write a concise blog intro

Figure 1: Code generation

- about the impact of AI on small businesses.’
- **Prompt for developer assistance:** ‘Explain the difference between GET and POST request methods in web development.’
- **Llama 2:** Best suited for chat applications, this model is fine-tuned on human annotations for natural conversational responses.
 - **Prompt for content creation:** ‘Generate an engaging conversation between a customer and a support bot regarding a refund process.’
 - **Prompt for developer assistance:** ‘Provide tips for optimising SQL queries in a database-heavy application.’
- **Phi-2:** Demonstrates excellent reasoning and language understanding, and is perfect for tasks requiring common-sense reasoning.
- **Prompt for content creation:** ‘Create a short story involving a time-travelling scientist and a historical figure.’
- **Prompt for developer assistance:** ‘Explain the concept of machine learning bias and how to mitigate it in AI models.’
- **LLaVA:** This is a multimodal model for tasks involving visual and language understanding, offering improved visual reasoning and OCR capabilities.
 - **Prompt for content creation (visual task):** ‘Describe the emotions conveyed in a photo of a sunset over the ocean (assuming the photo is provided).’
 - **Prompt for developer assistance (visual task):** ‘Analyse this
