

chart of user engagement over the last quarter and summarise the key trends (assuming the chart is provided).'

- **Mistral:** Outperforms other models in instruction following and text completion, and is suitable for a wide range of English tasks and

code generation.

- **Prompt for content creation:** 'Draft an email to stakeholders summarising the key achievements of the quarter.'
- **Prompt for developer assistance:** 'Generate a Python script to automate the extraction of data from JSON files and summarise the information.'
- **CodeLlama:** Designed for generating and discussing code, it supports multiple programming languages, making it invaluable for developers.
 - **Prompt for content creation:** 'Create a tutorial on the basics of Python programming for beginners.'
 - **Prompt for developer assistance:** 'Generate a function in JavaScript that dynamically filters an array of objects based on a given property value.'

These sample prompts are designed to illustrate the versatility and capability of each model within the Ollama WebUI platform. By utilising these prompts, users can explore a wide range of applications, from generating engaging content to solving complex programming challenges. The platform's intuitive interface and diverse model support make it an invaluable tool for organisations looking to enhance their operations with AI-driven solutions.

By following the steps outlined in this guide, you have successfully set up an offline, on-prem ChatGPT-like tool, empowering your organisation with a powerful AI solution that operates securely on your premises. Do explore the capabilities of Ollama and Ollama-WebUI, experiment with different models, and utilise the platform to its full potential.
