

you can use the command shown in Figure 2.

```
brew install ffmpeg
```

Otherwise, you can use the following command:

```
sudo apt update && sudo apt install ffmpeg
```

Now that we are all set and ready to use the Whisper model, let us proceed!

You can use the following command. I recorded a sample audio and will be using it here. Alternatively, you can also use audio files from the internet.

```
whisper sample_audio.wav
```

```
(base) Jishnus-MacBook-Air: downloads jishnusaurav$ whisper
audio_sample.wav
/Users/jishnusaurav/anaconda3/lib/python3.11/site-packages/
whisper/transcribe.py:126: UserWarning: FP16 is not supported
on CPU; using FP32 instead
warnings.warn("FP16 is not supported on CPU; using FP32
instead")
```

```
Detecting language using up to the first 30 seconds. Use
--language to specify the language
Detected language: English
[00:00.000 --> 00:07.000] hi this is jishnu how are you doing
today
```

As you can see, the transcription turned out to be perfect. You can also try this out with other languages.

I have recorded an audio file in Hindi and used the following command. This gives us the perfect transcription as a result.

```
whisper audio_sample_hindi.wav --language Hindi
(base) Jishnus-MacBook-Air: downloads jishnusaurav$ whisper
audio_sample_hindi.wav --language Hindi
/Users/jishnusaurav/anaconda3/lib/python3.11/site-packages/
whisper/transcribe.py:126: UserWarning: FP16 is not supported
on CPU; using FP32 instead
warnings.warn("FP16 is not supported on CPU; using FP32 instead")
[00:00.000 --> 00:05.000] मेरा नाम जिशनु है और मैं बहुत अच्छे इन्सान हूँ
(base) Jishnus-MacBook-Air: downloads jishnusaurav$
```

```
(base) Jishnus-MacBook-Air:downloads jishnusaurav$ pip install git+https://github.com/openai/whisper.git
