

Step 4. Define intents and entities:

Identify the intents (user goals or intentions) and entities (important pieces of information) that your chatbot should understand. Train Watson Assistant to

recognise these intents and entities to improve the accuracy of understanding user inputs. You can construct an intent called 'feedback' that acts in response to user input, as shown in Figure 3.

Step 5. Add a custom greeting node:

Click the 'Add node' button in the workspace editor to create a new node, as depicted in Figure 4. This node will represent the custom greeting.

Intent (10) ▼	Description	Modified ▼	Examples
#General_About_You	Request generic personal attributes.	a few seconds ago	20
#General_Agent_Capabilities	Request capabilities of the bot.	a few seconds ago	30
#General_Connect_to_Agent	Request a human agent.	a few seconds ago	38
#General_Ending	End the conversation.	a few seconds ago	37
#General_Greetings	Greet the bot.	a few seconds ago	27
#General_Human_or_Bot	Ask if speaking to a human or a bot.	a few seconds ago	12
#General_Jokes	Request a joke.	a few seconds ago	17
#General_Negative_Feedback	Express unfavorable feedback.	a few seconds ago	20
#General_Positive_Feedback	Express positive sentiment or gratitude.	a few seconds ago	19

Figure 3: Create intent to define the user queries

The screenshot shows the 'Dialog' tab in the IBM Watson Assistant workspace editor. On the left, a dialog flow diagram for 'Student Advisor' is visible, with a 'Greetings' node highlighted. On the right, the configuration for the 'Greetings' node is shown. The 'If assistant recognizes:' section has a trigger condition of '#General_Greetings'. The 'Then respond with:' section shows a response type of 'Text' with the message 'Hi there, how can I help you?'. Below this, there is a field for 'Enter response variation' and a note that 'Response variations are set to sequential. Set to random | multiline'. There are also buttons for 'Add response type' and 'Customize'.
