

Now you can add Shut down and Restart options to Ubuntu's Unity Dash!

It is now possible to add powering on/off options to Ubuntu's Unity Dash, a pleasant surprise for ardent Ubuntu users. This is possible through the new software called Atareao PPA, which adds the *Shut Down*, *Reboot*, *Hibernate*, *Log Out* and *Lock Screen* options to the Dash.

The items can be found in the Dash almost instantly, after installation has completed. In case you don't see them, you can log out and log in again to make the Dash detect the items. However, the downside is that all the options are promptless. Therefore, if you tend to accidentally click on things, this might not be very convenient for you. With Atareao, you will not be asked for confirmation when clicking on options.

The software also has a few unrelated packages, some of which might be unstable. Therefore, it is advisable to add the repository, install what you need, and then disable it through Software Sources. To uninstall, simply open the Ubuntu Software Centre, search for 'Power Commands', and click on 'Remove'.

Meanwhile, in Ubuntu 14.04, users will be able to choose whether or not they want application menus to appear globally or locally. It's been a long time coming, but finally it's here, much to the relief of users. Canonical has now come up with a replacement for the much-criticised global menu bar. Prepare for the re-emergence of locally integrated menus!

metered Internet connection, there will be the usual bandwidth ramifications.

Once you're done watching your movies, they will be '...buried in a secret folder somewhere on your drive until you restart your computer. Then it will be gone for good,' claim sources in Popcorn Time. Users can simply stream the movie again, later, as and when they desire. The app will be available only for the desktop. The developers have no plans for an Android or iOS version anytime soon.

Learn Linux for free from Harvard and MIT

The Linux Foundation will offer a Linux development course on edX, the massive open online course (MOOC) platform developed by the Massachusetts Institute of Technology (MIT) and Harvard University.

The move is part of an edX effort to expand its course offerings to include content from non-academic institutions.

The MOOC will offer the same material that is taught in its 'Introduction to Linux' class. Its content is designed for people with little to no experience in Linux and open source. People can start taking the MOOC this summer; the precise date will be announced next month.

The MOOC Linux class will be free and available to anyone with a Web connection, though the foundation normally charges US\$ 2,500 for the course that is already taught online and in person via authorised training partners.

Previously, all edX content came from the Linux Foundation's 32 member schools that include University of California (Berkeley), Dartmouth College and McGill University.

The non-academic institutions that will join the edX exercise include International Monetary Fund, The Smithsonian Institution and Inter-American Development Bank. Seven academic institutions that joined edX members are from the likes of Colgate University, Hamilton College and Open Courseware Consortium.

Contact Delhi Police via an Android app

You can now lodge a complaint about lost items in Delhi via a much easier process as the Delhi Police has launched a mobile app for Android phones. The application is called Delhi Police Lost Report and is available in Google's Play Store for free.

The application will enable trouble-free lodging of an FIR with the Delhi Police for loss of articles/documents in Delhi. To reach out to the public and build a more people-friendly image, the app will help Delhites to register complaints about lost items without going to the station. The complainant has to provide details like the name, father's or mother's name, address, mobile no, email ID, location where the item got lost in Delhi, date and time of loss (optional), when lodging the complaint via the app.

Once the complaint is lodged with 'Lost Report' and the register button is clicked, the complainant will get a LR number with other details that confirm the lodging of the report with the Delhi Police. You can further *View* and *Download*, or *Save* and *Exit* after getting the right prompt.

Also, the complainant can retrieve the report by clicking the *Retrieve* button for future use. You can even verify the authenticity of the report by entering the LR number when visiting the website of the Delhi Police (<http://delhipolice.nic.in>).
