

Figure 6: Xposed Installer opened in Halo mode

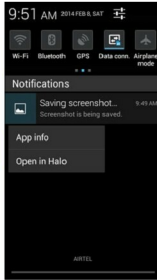

Figure 7: Long Press on Notification reveals Halo Mode

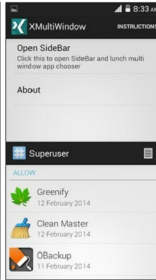

Figure 8: Two apps opened in split view

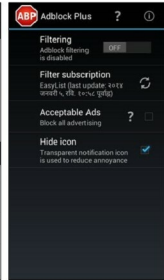

Figure 9: Adblock Plus with app settings filters

found in the Xposed Installer. It will ask for root access to prevent ads once you click on the *About* section. While Adblock Plus blocks most of the ads, it still leaves the empty area in the app, but MinMinGuard promises to remove that void. Open the app from the drawer and select the app for which you want to block ads. You can also select different parameters for individual apps, by clicking on *Edit* (the pencil icon).

So through Xposed Installer we enjoyed the Halo feature of Paranoid Android and split view of OmniROM. Also, users can install KitKat Toast Notifications and CyanogenMod's high pattern lockscreens. So, we now can

enjoy the best of all worlds with the stability of the stock ROMs, thanks to Xposed.
